

The background of the image is a highly textured, abstract artwork. It features a mix of warm colors like orange, red, and yellow, with darker, more chaotic areas in black and purple. The texture appears to be a combination of paint splatters, brushstrokes, and possibly some digital manipulation, creating a sense of intense energy and destruction. The overall composition is dense and layered, with various shades of red and orange dominating the lower half, while the upper half has more varied colors and textures.

The Black Hole Information Paradox Ali Akil, Cosimo Bambi, 2025-09-30 This book reviews a few different derivations of the Hawking radiation most main solutions to the paradox proposed in the literature and some analog laboratory experiments A black hole is an object whose gravity is so strong that nothing not even light can escape its grasp However applying quantum field theory on a black hole background Stephen Hawking showed that black holes are not completely black In fact they seem to emit a form of radiation that was named the Hawking radiation The Hawking radiation appears to be thermal and in a quantum state that is independent of the initial state that formed the black hole instead it solely depends on the black hole's total mass spin and electric charge A problem arises when we consider an initial system that collapses forms a black hole and eventually the black hole evaporates completely through Hawking radiation Since Hawking radiation depends solely on the black hole's total mass spin and electric charge it implies that numerous distinct initial states could all lead to the same final state Consequently the intricate details of the initial state seem to be lost which contradicts the unitarity of evolution of closed systems a fundamental principle of quantum mechanics The unitarity principle implies that closed systems evolve in a reversible manner such that knowing a system's final state and the way it evolved one can always determine its initial state The many to one evolution of the black hole initial state to radiation evolution is in a clear contradiction with this principle This is the black hole information paradox The black hole information paradox was found in the 1970s by Stephen Hawking Over the past 50 years it has attracted a lot of interest in the theoretical physics community and is still an active research field Chapters are written by leading experts in the field [Kliatt Young Adult Paperback Book Guide](#), 2005

Narlikar,T. Padmanabhan,2012-12-06 For several decades since its inception Einstein s general theory of relativity stood somewhat aloof from the rest of physics Paradoxically the attributes

which normally boost a physical theory namely its perfection as a theoretical framework and the extraordinary intellectual achievement underlying it prevented the general theory from being assimilated in the mainstream of physics. It was as if theoreticians hesitated to tamper with something that is manifestly so beautiful. Happily two developments in the 1970s have narrowed the gap. In 1974 Stephen Hawking arrived at the remarkable result that black holes radiate after all. And in the second half of the decade particle physicists discovered that the only scenario for applying their grand unified theories was offered by the very early phase in the history of the Big Bang universe. In both cases it was necessary to discuss the ideas of quantum field theory in the background of curved spacetime that is basic to general relativity. This is however only half the total story. If gravity is to be brought into the general fold of theoretical physics we have to know how to quantize it. To date this has proved a formidable task although most physicists would agree that as in the case of grand unified theories quantum gravity will have applications to cosmology in the very early stages of the Big Bang universe. In fact the present picture of the Big Bang universe necessarily forces us to think of quantum cosmology. Journal of Research United States. National Bureau of Standards, 1962
