## Me And Co:

**Il regno della Luna, Part 2** Niccolò Piccinni, Niccol Piccinni 1728 1800 wrote *Il regno della luna* for the Regio Ducal Theatro in Milan in 1770 and a revised version preserved in the only extant source was performed seven times in Dresden between 1773 and 1775 The work showcases the subversion of *dramma giocoso* conventions through which Piccinni presented characters that are at once realistic and sympathetic Noteworthy musical elements include the high proportion of ensembles in relation to arias the frequent use of accompanied recitative and the prominent role of the chorus The unknown librettist may have been Giuseppe Parini whose Enlightenment views are echoed in the opera's unconventional themes The libretto engages strongly with eighteenth century Italian discourse regarding the social and political position of women the non European Other and the societal costs and benefits of militarism and commerce Involving actual travel to the Moon the work also exemplifies early science fiction Presented here in its first modern edition *Il regno della Luna* stands as a testament to the most forward looking ideas of its time both musically and ideologically

*Catalysis* J.A. Moulijn, P.W.N.M. van Leeuwen, R.A. van Santen, 1993-09-09 *Catalysis* is a multidisciplinary activity which is reflected in this book The editors have chosen a novel combination of basic disciplines homogeneous catalysis by metal complexes is treated jointly with heterogeneous catalysis with metallic and non metallic solids The main theme of the book is the molecular approach to industrial catalysis In the introductory section Chapter 1 presents a brief survey of the history of industrial heterogeneous and homogeneous catalysis Subsequently a selection of current industrial catalytic processes is described Chapter 2 A broad spectrum of important catalytic applications is presented including the basic chemistry some engineering aspects feedstock sources and product utilisation In Chapter 3 kinetic principles are treated The section on fundamental catalysis begins with a description of the bonding in complexes and to surfaces Chapter 4 The elementary steps on complexes and surfaces are described The chapter on heterogeneous catalysis 5 deals with the mechanistic aspects of three groups of important reactions syn gas conversion hydrogenation and oxidation The main principles of metal and metal oxide catalysis are presented Likewise the chapter on homogeneous catalysis 6 concentrates on three reactions representing examples from three areas carbonylation polymerization and asymmetric catalysis Identification by in situ techniques has been included Many constraints to the industrial use of a catalyst have a macroscopic origin In applied catalysis it is shown how catalytic reaction engineering deals with such macroscopic considerations in heterogeneous as well as homogeneous catalysis Chapter 7 The transport and kinetic phenomena in both model reactors and industrial reactors are outlined The section on catalyst preparation Chapters 8 and 9 is concerned with the preparation of catalyst supports zeolites and supported catalysts with an emphasis on general principles and mechanistic aspects For the supported catalysts the relation between the preparative method and the surface chemistry of the support is highlighted The molecular approach is maintained throughout The first chapter 10 in the section on catalyst characterization summarizes the most common spectroscopic techniques used for the

characterisation of heterogeneous catalysts such as XPS Auger EXAFS etc Temperature programmed techniques which have found widespread application in heterogeneous catalysis both in catalyst characterization and simulation of pretreatment procedures are discussed in Chapter 11 A discussion of texture measurement theory and application concludes this section 12 The final chapter 13 gives an outline of current trends in catalysis Two points of view are adopted the first one focusses on developments in process engineering Most often these have their origin in demands by society for better processes The second point of view draws attention to the autonomous developments in catalysis which is becoming one of the frontier sciences of physics and chemistry In this book emphasis is on those reactions catalyzed by heterogeneous and homogeneous catalysts of industrial relevance The integrative treatment of the subject matter involves many disciplines consequently the writing of the book has been a multi author task The editors have carefully planned and harmonized the contents of the chapters
