Measurement And Geometry:

Young Children Learn Measurement and Geometry Marja van den Heuvel-Panhuizen, Kees Buys, 2008-01-01

Improving the quality of education is an important ambition of educational policy. The TAL project aims to contribute to this. It is a project initiated by the Dutch Ministry of Education, Culture and Science and carried out by the Freudenthal Institute FI of Utrecht University and the Dutch National Institute for Curriculum Development SLO and partly conducted in cooperation with the Rotterdam Center for Educational Services CED. The quality of education can be improved in many ways. TAL proposes to do this by providing insights into the broad longitudinal outline of the learning teaching process and its internal coherence. The intention of TAL is to give support to teachers in combination with the guidance they get from mathematics textbook series. This learning teaching trajectory description for measurement and geometry aims to succeed in stimulating classroom practice and to inspire teachers to didactical efforts on a high level in what was up to now in the lower grades of primary school, a less known subdomain of mathematics. The learning teaching trajectory with intermediate attainment targets offers support to teachers in order to give measurement and geometry a full and worthy place within the mathematics curriculum. For that to be the case, the foundation that is made with this learning teaching trajectory must be built upon in the higher grades of primary school and beyond.

Measurement and Geometry by Design Russell F. Jacobs, 1997-04-01

Measurement and Geometry in Upper Primary School Koeno Gravemeijer, Nisa Figueiredo, Els Feijs, Ronald Keijzer, Frans van Galen, Fokke Munk, 2016. This book is the fourth and final publication in the TAL project series. This TAL project was initiated by the Dutch Ministry of Education, Culture and Science with the aim to improve the quality of mathematics education by providing a perspective on didactic goals and learning teaching trajectories and on the relationship between them. The focus of this book is on measurement and geometry in the upper grades of primary education. Measurement and geometry are important topics which perhaps do not get the emphasis they deserve. They build in a manner of speaking a bridge between everyday reality and mathematics. Measurement concerns the quantification of phenomena; consequently it makes these phenomena accessible for mathematics. Geometry establishes the basis for understanding the spatial aspects of reality. See for extra information related to this book: www.fi.uu.nl/publicaties/subsets/measurementgeometry

Millie

Measures Richard John, Sara McDonald, Randall Hall, 2019-03-13. In this book, Millie the Mathematician helps us learn about measuring length using informal units of measurement. When Millie's dad leaves his ruler at work, Millie is forced to make comparative measures of the length of her desk by using her own feet as informal units of measurement. This book addresses content from the Measurement and Geometry strand within the Using units of measurement sub-strand. The specific Australian Curriculum content descriptor addressed is Measure and compare the lengths and capacities of pairs of objects using uniform informal units.
