Methods of Clinical

Epidemiology Suhail A. R. Doi, Gail M. Williams, 2013-06-01 Methods of Clinical Epidemiology serves as a text on methods useful to clinical researchers. It provides a clear introduction to the common research methodology specific to clinical research for both students and researchers. This book sets out to fill the gap left by texts that concentrate on public health epidemiology and focuses on what is not covered well in such texts. The four sections cover methods that have not previously been brought together in one text and serves as a second level textbook of clinical epidemiology methodology. This book will be of use to postgraduate students in clinical epidemiology as well as clinical researchers at the start of their careers.

Multidisciplinary Approaches to Theory in Medicine Ray Paton, Laura A. McNamara, 2006-01-06 This volume will be a collection of chapters from authors with wide experience in their research field. The purpose is to produce a coherent book that reflects the common theme of theory in medical thinking and multidisciplinary research practice. In this context, theory relates to frameworks of concepts, facts, models, etc. that help to inform practitioners, clinicians, scientists, and engineers both within their own fields and as they seek to share dialogue with colleagues from other fields. Multidisciplinary Approaches to Theory in Medicine will therefore be integrative across a broad spectrum of fields within medicine. To achieve this, the chapters will be associated with others in a number of meaningful ways. Each chapter will share a number of points of contact that will include at least two of the following: Similar biomedical area e.g. immunity, neuroscience, endocrinology, pathology, oncology, haematology. Similar multidisciplinary theoretical contexts e.g. modelling, analysis, description, visualization, complex systems. Similar multidisciplinary medical issues and questions e.g. clinical practice, decision making, informatics. Uniquely explores role of interdisciplinary exchange in the development and expansion of medical theory. Timely and insightful essays on the growth and development of medical theories from some of the world's top clinicians and medical researchers including Werner Arber, Frank Vertosick, and David Weatherall. Assembles diverse perspectives on medicine and physiology from biology, statistics, ethics, computer science, philosophy, history. Uniquely illuminates the social and historical processes through which theoretical research translates into clinical practice. Reveals the growing role of technology, especially computational modelling, in changing the nature of Western medicine.
