Handbook of Research Methods in Cardiovascular Behavioral Medicine Neil Schneiderman, Stephen M. Weiss, Peter G. Kaufmann, 2013-11-21 Cardiovascular disease continues to be the number one disease in the world and has been developed and shaped into the one source of morbidity and mortality in our country following the definition of the World Health Organization Despite a 35% reduction since 1964 the prevalence of cardiovascular disease has increased Behavioral medicine is the interdisciplinary field concerned with the development and integration of behavioral and biomedical science knowledge and techniques to the understanding of health and illness and the application of this knowledge and these techniques to prevention diagnosis treatment and rehabilitation The Framingham study among others has identified three major risk factors implicated in the development of CHD smoking elevated serum cholesterol and high blood pressure

Castelli et al This concept of biobehavioral collaboration 1986 Given that these factors account for less than 50% of the variance associated with CHD, it is important to consider how they might more effectively be addressed. Jenkins 1976 it has become obvious that additional diagnostic, treatment and prevention strategies must be identified if further progress is to be made in disease prevention and simultaneously among others behavioral psych control. Atrial Fibrillation John Rawles, 2012-12-06 Atrial fibrillation is a common and important arrhythmia which affects nearly 5% of people over 70. This synthesis of current knowledge which is based on much original work by the author brings together for the first time the many areas of advance in recent years and will help to make experts from the highly specialised fields within cardiology aware of the developments within others.
