Schneiderman, Stephen M. Weiss, Peter G. Kaufmann, 2013-11-21 Cardiovascular disease continues to be the number one medical problem in the United States. Cardiovascular medicine was developed and shaped into the one source of morbidity and mortality in our country following definition. Despite a 35% reduction since 1964, cardiovascular disease remains the leading cause of death in the United States. Behavioral medicine is the interdisciplinary field concerned with the development and integration of behavioral and biomedical science knowledge and techniques. Cardiovascular disease claimed nearly 1 000 000 lives each year in the United States. Havlik and Feinleib, 1979 relevant to the understanding of health and illness and The Framingham study among others has identified the application of this knowledge and these techniques to prevention, diagnosis, treatment and rehabilitation. Identified three major risk factors implicated in the development of CHD: smoking, elevated serum cholesterol and high blood pressure. Castelli et al, 1978. This concept of biobehavioral collaboration was developed in 1986. Given that these factors account for less than 50% of the variance associated with CHD, scientists and clinicians of many disciplines need to consider how they might more effectively collaborate. Jenkins, 1976. It has become obvious that additional diagnostic, treatment and prevention strategies must be identified if further progress is to be made in disease prevention and simultaneously among others behavioral psychology control. *SRS Research Information System: Index; Volume I; Ability Through Facilitation* United States.
