## **Measurement Equivalence:**

**Equivalence in Measurement** Chester A. Schriesheim, Linda L. Neider, 2001-10-01 This volume highlights research and conceptual insights into one of the most basic and yet perplexing research issues in management handling and assessing the comparability of our measurement devices across groups and measures One of the most consistently difficult concerns in management research over the past three decades has been trying to reconcile measurement equivalence issues utilizing diverse samples Given the emphasis on diversity in the human resources area and the internationalization of business and management measurement equivalence is more of a general concern now than ever before If we are not able to successfully address concerns about measurement equivalence research examining differences between groups could be highly misleading and or erroneous Consequently we hope that the thoughtful contributions of the scholars in this volume will help future scholars to better address measurement equivalence concerns

Measurement Invariance Rens Van De Schoot, Peter Schmidt, Alain De Beuckelaer, 2015-10-05 Multi item surveys are frequently used to study scores on latent factors like human values attitudes and behavior Such studies often include a comparison between specific groups of individuals either at one or multiple points in time If such latent factor means are to be meaningfully compared the measurement structures including the latent factor and their survey items should be stable across groups and or over time that is invariant Recent developments in statistics have provided new analytical tools for assessing measurement invariance MI The aim of this special issue is to provide a forum for a discussion of MI covering some crucial themes 1 ways to assess and deal with measurement non invariance 2 Bayesian and IRT methods employing the concept of approximate measurement invariance and 3 new or adjusted approaches for testing MI to fit increasingly complex statistical models and specific characteristics of survey data The special issue started with a kick off meeting where all potential contributors shared ideas on potential papers This expert workshop was organized at Utrecht University in The Netherlands and was funded by the Netherlands Organization for Scientific Research NWO VENI 451 11 008 After the kick off meeting the authors submitted their papers all of which were reviewed by experts in the field The papers in the eBook are listed in alphabetical order but in the editorial the papers are introduced thematically Although it is impossible to cover all areas of relevant research in the field of MI papers in this eBook provide insight on important aspects of measurement invariance We hope that the discussions included in this special issue will stimulate further research on MI

Sha, Tim Gabel, 2020-04-08 Language users such as survey respondents and interviewers must speak the same language literally and figuratively to interact with each other. As diversity grows in the United States and globally, interviewers and respondents may speak a different language or speak the same language differently that reflects their own cultural norms of communication. This book discusses the role of language in survey research when comparisons across groups, cultures, and countries are of interest. Language use in surveys is dynamic, including words, symbols, e.g., arrows, and even emojis. The entire survey life cycle is carried out through language. Researchers write or translate questions and instructions that will address research questions and then pretest them using various techniques, including qualitative inquiry that focuses on context beyond just the numbers. Human or virtual data collectors use persuasive messages to communicate with survey respondents and encourage their survey participation. Respondents must comprehend and interpret survey questions and instructions to provide a response. All of these survey processes and products contribute to data quality, and the role of language is essential.

**Praise for *The Essential Role of Language in Survey Research*** This book highlights the importance of language issues for data quality, provides frameworks for conceptualizing the underlying processes, presents diverse methods for identifying problems at an early stage, and illustrates and evaluates potential solutions in the form of improved translation and pretesting procedures.

Daphna Oyserman and Norbert Schwarz, University of Southern California The role of language and issues of language are particularly salient for multinational, multiregional, or multicultural 3MC comparative surveys that are designed to collect data and compare findings from two or more populations. This book highlights the critical need to consider a range of issues pertaining to language at various aspects and stages of 3MC survey design and implementation.

Julie de Jong, Kristen Cibelli Hibben, and Jennifer Kelley, University of Michigan and Dorothea Behr, GESIS Leibniz Institute for the Social Sciences, Germany The need to reach increasingly diverse target populations requires survey researchers to be ever more aware of the role of verbal and nonverbal language in the survey research process. This book provides a great resource for readers new to the subject as well as experts seeking to understand the implications of language for survey design, implementation, and resulting data quality.

Antje Kirchner, RTI International and Coeditor of *Big Data Meets Survey Science: A Collection of Innovative Methods* Covering a range of topics fundamental to high quality surveys in cross cultural contexts, this new volume features language in its varied roles within survey methodology and practice, including questionnaire design, translation, and fieldwork implementation for quantitative and qualitative research.

**The Essential Role of Language in Survey Research** uses in-country examples and analyses from across the globe to underscore specific challenges that survey researchers confront in their work.
