, *Development and Evaluation of Communication-based Measures of Situation Awareness*

Kenneth Lamar Evans, 2003 The present investigation sought to develop and field test two new behavioral measures of situation awareness SA that rated the content of small unit radio transmissions Initially a four person team generated an item pool of 318 critical incidents of communication behavior each intended to represent either an outstanding typical or poor level of SA on the part of small unit leaders A group of 24 independent evaluators then rated the degree to which they thought each of the 318 items was related to the concept of SA The 20 items having the highest levels of agreement among the independent evaluators within each SA level were chosen to comprise the Radio Communications Checklist of Leader Awareness RCCOLA and the Future Expectations of Likely Leader Awareness FELLA scale Six field trials were then conducted with each of seven squad leaders and their respective squads Based on their monitoring of squad and platoon radios two independent raters completed separate RCCOLA checklists during each of the 42 total trials as well as separate FELLA scales after the completion of each trial Interrater agreement was generally high for both measures Based on their methods of construction we can also assume they possess some content related validity

Team Performance

Assessment and Measurement Michael T. Brannick, Eduardo Salas, Carolyn W. Prince, 1997-06-01 This book began at a conference on team performance measurement held at the University of South Florida Several participants at the conference felt that a book on team performance measurement would be of interest to a broader audience and they began looking for authors in diverse disciplines Some of the chapters in this book closely follow material presented at the conference Many others report work that was done subsequently or was done by authors not present at the conference The result is a book rich in its diversity of approaches to measurement and which contains illustrations of many different teams This book is the first of its kind to bring together a collection of scholars and practitioners focusing solely on the problem of team performance measurement Although much has been written about team and group effectiveness little theoretical and empirical progress has been made in the measurement of team processes and outcomes The book represents a major step forward both theoretically and empirically Section 1 provides a rich theoretical basis for measurement including designing measures to be used in team training measures of shared mental models and measures of team workload Section 2 addresses methodological developments and issues including the design and validation of simulations surveys and observer checklists It also deals with issues such as the consistency of team performance and task and level of analysis issues Section 3 provides applications and illustrations of team performance measures in such teams as nuclear power control room operators theater technical crews and aircraft cockpit crews Section 4 offers guidance for anyone interested in developing their own measures of team performance There are both theoretical and practical reasons for the current interest in teams Psychological research interest in groups and teams has returned and is now a thriving area Self managed work groups and semi autonomous work groups have become increasingly common in industry so there is an increased interest in team functioning from a practical standpoint This volume s purpose is to describe recent advances in the measurement of team performance

both process and outcome Several of the chapters provide recommendations on how when and why to measure aspects of teams In addition to describing what is currently known the book also discusses what remains to be known and what needs to be done next The book is intended primarily for those interested in research about team processes and outcomes researchers and academics who possess a basic understanding of statistics and psychometrics The bulk of research reported has applied aims which provide much practical information such as how to design simulations rating forms and dimensions of team performance useful for feedback to many kinds of teams In addition there are examples from several different kinds of teams including aircrews nuclear power plant operators hospital workers ship combat information center groups and theater technicians Therefore the book should be useful to people who want to design measures to evaluate teams
