Kling, 2014-06-05 The first edition of this important work was the winner of the 2002 Publication of Enduring Quality award by the Association of Environmental and Resource Economists The continuing premise for the book is that estimates of the economic values of environmental and natural resource services are essential for effective policy making As previous editions the third edition which includes two additional co authors presents a comprehensive treatment of the theory and methods involved in estimating environmental benefits Researchers policy makers and practitioners will welcome the work as an up to date reference on recent developments Students will gain a better understanding of the contribution that economics as a discipline can make to decisions concerning pollution control and human health recreation environmental amenities and other critical issues concerning the way we use and interact with environmental and natural resource systems To reflect recent progress in both the theory and practice of non market valuation the third edition includes more details on empirical approaches to measurement expanded discussion of the reasons for divergence between willingness to pay and willingness to accept compensation and increased coverage of econometric issues encountered in estimation In keeping with its cutting edge orientation it also includes more discussion of survey design equilibrium sorting models and the implications of behavioral economics for welfare measurements and benefit cost analysis

Valuation of Regulating Services of Ecosystems Pushpam Kumar, Michael D. Wood, 2010-07-13 The valuation of regulating services is an evolving

field of ecological economics In this book Professor Pushpam Kumar and Professor Michael D Wood have invited some of the foremost international experts in the field of ecosystem services valuation to contribute chapters on the valuation of regulating services and highlight some of the main obstacles to the implementation and acceptance of these methodologies in the context of decision making *Agri-Environmental Policies in a Transitional Economy: The Value of Agricultural*

Biodiversity in Hungarian Home Gardens Ekin Birol, Melinda Smale, and Ágnes Gyovai, **Resource Abundance and Economic Development** R. M. Auty, 2001-06-28 Since the 1960s the per capita incomes of the resource poor countries have grown significantly faster than those of the resource abundant countries In fact in recent years economic growth has been inversely proportional to the share of natural resource rents in GDP so that the small mineral driven economies have performed least well and the oil driven economies worst of all Yet the mineral driven resource rich economies have high growth potential because the mineral exports boost their capacity to invest and to import Resource Abundance and Economic Development explains the disappointing performance of resource abundant countries by extending the growth accounting framework to include natural and social capital The resulting synthesis identifies two contrasting development trajectories the competitive industrialization of the resource poor countries and the staple trap of many resource abundant countries The resource poor countries are less prone to policy failure than the resource abundant countries because social pressures force the political state to align its interests with the majority poor and follow relatively prudent policies Resource abundant countries are more likely to engender political states in which vested interests vie to capture resource surpluses rents at the expense of policy coherence A longer dependence on primary product exports also delays industrialization heightens income inequality and retards skill accumulation Fears of Dutch disease encourage efforts to force industrialization through trade policy to protect infant industry The resulting slow maturing manufacturing sector demands transfers from the primary sector that outstrip the natural resource rents and sap the competitiveness of the economy The chapters in this collection draw upon historical analysis and models to show that a growth collapse is not the inevitable outcome of resource abundance and that policy counts Malaysia a rare example of successful resource abundant development is contrasted with Ghana Bolivia Saudi Arabia Mexico and Argentina which all experienced a growth collapse The book also explores policies for reviving collapsed economies with reference to Costa Rica South Africa Russia and Central Asia It demonstrates the importance of initial conditions to successful economic reform Environmental Management Accounting and Supply Chain

Management Roger L. Burritt, Stefan Schaltegger, Martin Bennett, Tuula Pohjola, Maria Csutora, 2011-05-19 This volume's focus on the environmental accounting of supply chain processes is of particular relevance because these processes supply data about the environmental impact of relationships between business organisations an area where the boundary separating internal and external accounting is ill defined Here contributors advocate what they term accounting for cooperation as a more environmentally positive complement to the paradigmatic practice of accounting for competition Wellbeing, Nature,

and Moral Values in Economics Heinz Welsch, 2023-02-15 Drawing on more modern expressions of economic analysis this book explores the interplay between wellbeing nature and moral values in economics In standard accounts of economics these three themes are typically treated in isolation from each other or else overlooked entirely This book argues that due to this blinkered approach standard economic analysis is poorly equipped to deal with global contemporary challenges including climate change biodiversity loss sustainability and the risk of pandemic diseases The book reviews the economic literature to show that the last few decades has seen the re insertion into economic analysis of human wellbeing natural resources and moral values three themes present in early economic thought that are highly relevant to the challenges ahead The book argues for the greater integration of these three themes as the natural environment is crucial to human wellbeing and moral values are essential for environmentally benign behaviors The book also focuses on how specific moral values identified by contemporary moral psychology actually shape economic behavior rather than how abstract ethical principles they should shape economic behavior The book will be of significant interest to readers in the economics and social sciences particularly behavioral economics and social psychology *The ^AOxford Handbook of Value Theory* Iwao Hirose, Jonas

Olson, 2015-05-01 Questions about value are important in many contexts Value theory or axiology studies which things are good or bad how good or bad they are and most fundamentally what it is for a thing to be good or bad This Handbook provides a comprehensive and state of art overview of the debate in value theory **Natural Resources Management in**

Agriculture Bekele Shiferaw, H. Ade Freeman, Scott M. Swinton, 2005 In response to increasing concerns about the degradation of natural resources and the sustainability of agriculture many research programmes have been established in natural resource management NRM However although methods for evaluating the impacts of crop improvement technologies are well developed there is a dearth of methods for evaluating the impacts of NRM interventions This is partly due to the complexity of interactions among natural resources spatial and temporal dimensions of impact and the valuation of direct and indirect environmental costs and benefits This book discusses the unique features and methodological difficulties of NRM impact assessment It examines the strengths and weaknesses of various impact assessment approaches including econometric bio economic and more direct methods It also assesses and identifies data requirements for developing impact indicators and recommends suitable methodologies for assessing the impacts of NRM technologies on issues such as soil and water conservation and watershed and biodiversity management *Valuing Environmental Preferences* Ian

Bateman, Kenneth George Willis, 2001 Just as individuals have preferences regarding the various goods and services they purchase every day so they also hold preferences regarding public goods such as those provided by the natural environment However unlike private goods environmental goods often cannot be valued by direct reference to any market price This makes economic analysis of the costs and benefits of environmental change problematic Over the past few decades a number of methods have developed to address this problem by attempting to value environmental preferences Principal among these

has been the contingent valuation CV method which uses surveys to ask individuals how much they would be willing to pay or willing to accept in compensation for gains and losses of environmental goods The period from the mid 1980s to the present day has seen a massive expansion in use of the CV method From its original roots in the USA through Europe and the developed world the method has now reached worldwide application with a substantial proportion of current studies being undertaken in developing countries where environmental services are often the dominating determinant of everyday living standards The method has simultaneously moved from the realm of pure academic speculation into the sphere of institutional decision analysis However the past decade also witnesses a developing critique of the CV method with a number of commentators questioning the underlying validity of its derived valuations This volume therefore reflects a time of heated debate as well as from commentators who see it as an interesting experimental tool regardless of the question of absolute validity of estimates The book embraces the theoretical methodological empirical and institutional aspects of the current debate It covers US European and developing country applications and the institutional frameworks within which CV studies are applied

Price, Principle, and the Environment Mark Sagoff,2004-09-06 Mark Sagoff has written an engaging and provocative book about the contribution economics can make to environmental policy Sagoff argues that economics can be helpful in designing institutions and processes through which people can settle environmental disputes However he contends that economic analysis fails completely when it attempts to attach value to environmental goods It fails because preference satisfaction has no relation to any good Economic valuation lacks data because preferences cannot be observed Willingness to pay is benchmarked on market price and thus may reflect producer cost not consumer benefit Moreover economists cannot second guess market outcomes because they have no better information than market participants Mark Sagoff's conclusion is that environmental policy turns on principles that are best identified and applied through political processes Written with verve and fluency this book will be eagerly sought out by students and professionals in environmental policy as well as informed general readers
