

Model 312 Bending Proof Tester

- Industry-standard Bending Proof Tester for quality control testing of structural dimension lumber
- Rigid mechanical design provides for accurate measurement over a full range of dimension lumber sizes and grades
- Tests North American or metric size lumber
- New Digital Force Measurement System
- Multi-point E measurement
- Simplified operation for combined E and proof load measurements

Description

- Measures bending modulus of elasticity (E) and ultimate bending strength of dimension lumber
- Designed to measure bending strength and stiffness of the full range of dimension lumber sizes
- Operator-selectable ranges are zero to 1,000 pounds or zero to 10,000 pounds (0-10 kN or 0-25 kN) (Metric readout is optional)
- A four-point loading system applies a specified load at 1/3- and 2/3-span locations which allows the bending moment and the extreme fiber stress to essentially be constant between the inboard loading heads
- E calculated from the deflection and force measurements
- Deflection of strong-back: less than 1% of test-piece deflection, at worst case
- Electronic load cell measures the total applied force
- Peak track-and-hold circuit stores the maximum force reading, allowing the operator to stress a piece to failure without watching the digital readout during the test
- Digital display indicates E for standard cross-sections at a predetermined deflection and span
- Lumber normally tested on-edge; flatwise testing is optional
- The back-load feature allows lumber to be loaded from the back
- Results provide for direct comparison with the Model 7100 CLT and Model 7200 HCLT.
- Model 312 system includes a Digital Force Measurement System, hand-operated hydraulic pump, and an aluminum test bar
