Measures Of Effectiveness For The Information Age Army:

Measures of Effectiveness for the Information-Age Army, 2001 The 1990s have witnessed the dawn of what future historians will doubtless call the Information Age It is clear that the ability to acquire retrieve manipulate and exchange information has had and will continue to have a profound effect on a host of human activities Warfare is no exception Although it is clear that information will have a far reaching effect quantifying or measuring that effect how to do so is far from well understood Such an understanding is important to the Army particularly at a time when it is spending a considerable amount of its scarce investment capital on establishing Information Age links across its forces the so called digitization of the Army As it transforms itself the Army needs Information Age analytic tools to help it make the best choices possible Chief among the analytic tools required are good measures of effectiveness MOEs that can demonstrate the value of information in terms of military outcomes The current set of measures such as force exchange and territorial gains or losses will continue to be useful but they do not give much visibility to the growing contribution of information Moreover they are often calculated with simplistic head on head attrition models that omit important processes in which information plays a big role

Cortada, 2007-11-06 In The third volume of The Digital Hand James W Cortada completes his sweeping survey of the effect of computers on

American industry turning finally to the public sector and examining how computers have fundamentally changed the nature of work in government and education This book goes far beyond generalizations about the Information Age to the specifics of how industries have functioned now function and will function in the years to come Cortada combines detailed analysis with narrative history to provide a broad overview of computing and telecommunications role in the entire public sector including federal state and local governments and in K 12 and higher education Beginning in 1950 when commercial applications of digital technology began to appear Cortada examines the unique ways different public sector industries adopted new technologies showcasing the manner in which their innovative applications influenced other industries as well as the U S economy as a whole He builds on the surveys presented in the first volume of the series which examined sixteen manufacturing process transportation wholesale and retail industries and the second volume which examined over a dozen financial telecommunications media and entertainment industries With this third volume The Digital Hand trilogy is complete and forms the most comprehensive and rigorously researched history of computing in business since 1950 providing a detailed picture of what the infrastructure of the Information Age really looks like and how we got there Managers historians economists and those working in the public sector will appreciate Cortada s analysis of digital technology s many roles and future possibilities

Distributed Networked Operations Jeff Cares,2006 Distributed Networked Operations describes a refinement of what popularly has been called network centric operations Distributed networked operations envision combat conducted by large numbers of diverse small units rather than by small numbers of generally homogenous large units In theory and to a significant extent in practice in Afghanistan and Iraq distributed networked operations involve a mixed bag of naval ground and air units none of which is individually as powerful as a fleet air wing or armored division Author Jeff Cares discusses distributed networked operations from the perspective of adaptive control theory and details implications for force structure hardware employment and networked competition Jeff presents a formal model of Information Age combat and explores the civilian business applications of the theory

Innovations Through Information Technology Information Resources

Management Association. International Conference,2004-01-01 Innovations Through Information Technology aims to provide a collection of unique perspectives on the issues surrounding the management of information technology in organizations around the world and the ways in which these issues are addressed This valuable book is a compilation of features including the latest research in the area of IT utilization and management in addition to being a valuable source in support of teaching and research agendas Urban Battle Command in the 21st Century Russell W. Glenn,Gina Kingston,2005-02-09 In every operation the functions of command control intelligence surveillance and reconnaissance ISR and communications are all fundamental to success But in cities the dense population many manmade structures and other challenges act to severely impede these functions in several ways This monograph contemplates the nature of those challenges and proposes several recommendations to surmount them in both the short and longer terms Collective Decision Making Adrian Van Deemen,Agnieszka Rusinowska,2010-06-03 Harrie de Swart is a Dutch logician and mathematician with a great and open interest in applications of logic After being confronted with Arrow's Theorem Harrie became very interested in social choice theory In 1986 he took the initiative to start up a group of Dutch scientists for the study of social choice theory This initiative grew out to a research group and a series of colloquia which were held approximately every month at the University of Tilburg in The Netherlands The organization of the colloquia was in the hands of Harrie and under his guidance they became more and more internationally known Many international scholars liked visiting the social choice colloquia in Tilburg and enjoyed giving one or more presentations about their work They liked Harrie's kindness and hospitality and the openness of the group for anything and everything in the field of social choice The Social Choice Theory Group started up by Harrie consisted and still consists of scholars from several disciplines mostly economics mathematics and mathematical psychology It was set up for the study of and discussion about anything that had to do with social choice theory including and not in the least the supervision of PhD students in the theory Members of the group were among others Thom Bezembinder psychologist Hans Peters mathematician Pieter Ruys economist Stef Tijs mathematician and game theorist and of course Harrie de Swart logician and mathematician **The Lessons of History: The Chinese People's Liberation Army at 75** , *Parameters* ,2002 **Army RD & A.** ,1999 Professional publication of the RD A community Macrocognition: The Science and Engineering of Sociotechnical Work Systems Paul Ward,Robert R. Hoffman,Gareth E. Conway,Jan Maarten Schraagen,David Peebles,Robert J. B. Hutton,Erich J. Petushek,2018-02-28 The increasing complexity of work systems and changes in the nature of workplace technology over the past century have resulted in an exponential shift in the nature of work activities from physical labor to cognitive work Modern work systems have many characteristics that make them cognitively complex They can be highly interactive comprised of multiple agents and artifacts information may be limited and distributed across space and time task goals are frequently ill defined conflicting dynamic and emergent planning may only be possible at general levels of abstraction or require adaptive solutions some degree of proficiency or expertise is required the stakes are

often high and uncertainty time constraints and stress are seldom absent To complicate matters further cognition in complex work settings is typically constrained by broader professional organizational and institutional practice and policy These features of cognitive work present significant challenges to scientific methodology and theory and subsequent design of reliable interventions Historically philosophers and scientists have attempted to understand the mental activities experienced during cognitive work at multiple levels of analysis using divergent methods Some have examined cognition at an associative contextual functional or holistic level relying on naturalistic methods to understand the higher mental processes as they work in harmony during goal directed behavior Others have embraced experimental methods and favored internal over external validity often reducing cognition to a psychology of fundamental acts such as short term memory access with millisecond shifts in attention More recently Macro cognition has evolved as a complementary paradigm Macro cognitive researchers have studied the cognitive functions and processes associated with skilled adaptive collaborative and resilient cognitive work in the context of the aforementioned complexities of psychotechnical and sociotechnical work systems Typically this research has been carried out using cognitive task analytic techniques that draw on both naturalistic and quasi experimental methods The primary goals of research in Macro cognition are to better understand cognitive adaptations to complexity to increase our theoretical understanding of the organism environment relations by studying the mapping between cognitive work and real world demands and to promote use inspired research capable of improving system performance **Technical Report** ,1999
