Rubaiyat Hossain Mondal, Prajoy Podder, Subrato Bharati, 2022-06-27 This book was created with the intention of informing an international audience about the latest technological aspects for developing smart agricultural applications As artificial intelligence AI takes the main role in this the majority of the chapters are associated with the role of AI and data analytics components for better agricultural applications The first two chapters provide alternative wide reviews of the use of AI robotics and the Internet of Things as effective solutions to agricultural problems The third chapter looks at the use of blockchain technology in smart agricultural scenarios In the fourth chapter a future view is provided of an Internet of Things oriented sustainable agriculture Next the fifth chapter provides a governmental evaluation of advanced farming technologies and the sixth chapter discusses the role of big data in smart agricultural applications The role of the blockchain is evaluated in terms of an industrial view under the seventh chapter and the eighth chapter provides a discussion of data mining and data extraction which is essential for better further analysis by smart tools The ninth chapter evaluates the use of machine learning in food

processing and preservation which is a critical issue for dealing with issues concerns regarding insufficient food sources The tenth chapter also discusses sustainability and the eleventh chapter focuses on the problem of plant disease prediction which is among the critical agricultural issues Similarly the twelfth chapter considers the use of deep learning for classifying plant diseases Finally the book ends with a look at cyber threats to farming automation in the thirteenth chapter and a case study of India for a better smart and sustainable agriculture in the fourteenth chapter This book presents the most critical research topics of today's smart agricultural applications and provides a valuable view for both technological knowledge and ability that will be helpful to academicians scientists students who are the future of science and industrial practitioners who collaborate with academia

Development of agricultural mechanization in Ghana Cossar, Frances, Houssou, Nazaire, Asante-Addo, Collins, 2016-05-06 This paper characterizes the network of tractor service providers in Ghana Using the case of Ejura Sekye district this research examines the implications of the adoption of mechanical technology in agriculture for farmers and institutions based on perspectives that go beyond the suppliers and users of mechanization services alone The results suggest that in addition to rising population density and favorable access to local and regional markets the current pattern of use of tractors by farmers in Ejura district emerged from favorable historical and institutional factors The current arrangement involving a network of private tractor owners providing tractor hire services to a broad set of farmers draws upon the legacy of an earlier institutional intervention and is sustained organizationally through kinship and other existing social relationships within and outside the district Moreover the expansion of tractor use has created a set of new roles and relationships within the network Participation in the network is affected by various factors including farmers' access to capital and knowledge experience and contacts This privately operated network is significantly more efficient and provides small scale farmers with considerably better access to plowing service than did previous government managed systems Further development of the tractor service sector is likely to improve the quality of mechanization offered to smallholder farmers enhance bargaining power for farmers seeking such services and reduce structural weaknesses within the network
