Clark,Pierre Henkart, **Natural and Induced Cell-Mediated Cytotoxicity** Gert Riethmüller,Peter Wernet,Gustavo Cudkowicz,2014-06-28 Natural and Induced Cell Mediated Cytotoxicity Effector and Regulatory Mechanisms contains the proceedings of the Erwin Riesch Symposium organized on the occasion of the Fifth Centennial of the University of Tübingen in Germany on October 20-23 1977 The symposium provided a forum for reviewing the progress that has been made in understanding the effector and regulatory mechanisms underlying natural and induced cell mediated cytotoxicity Topics covered range from the immunobiology of natural killer cells to the role of macrophages as regulator accessory and effector cells in cytotoxicity Comprised of 27 chapters this book begins by analyzing the characteristics of natural cytotoxic cells in mice followed by a discussion on the generation in vivo of mouse natural cytotoxic cells and the role of cytotoxic T cells in the local defense against solid tumors Subsequent chapters focus on the natural cytotoxicity of human lymphocytes opposing effects of interferon on natural killer and target cells susceptibility of cloned melanoma to natural cytotoxicity and cell mediated immunity against avian virus induced tumor cells The book also examines alternative routes of entry for cell surface antigens into the immune system before concluding with a chapter that considers interferon induction by *Corynebacterium parvum* This monograph should be of value to students researchers and practitioners in the fields of biology and immunology

*Studies of the Mechanisms of Cell-mediated Cytotoxicity* ,1977 Natural and Induced Cell-mediated Cytotoxicity Gustavo Cudkowicz,Gert Riethmüller,Peter Wernet,1979 **Mechanisms for the Post-exercise Suppression of Natural Cell-mediated Cytotoxicity** William Arthur Braun,1998 **Cytotoxic Drug Resistance Mechanisms** Robert Brown,Uta Böger-Brown,2010-11-09 There is now a range of cytotoxic drugs that have considerable clinical usefulness in producing responses in tumors and even in a small proportion of cases cure However the acquisition of drug resistance is a major clinical problem and is perhaps the main limiting factor in successful treatment of cancer Thus a tumor initially sensitive to chemotherapy will in the majority of cases eventually recur as a resistant tumor which will then progress Much of our understanding of drug resistance mechanisms comes from the study of tumor cell lines grown in tissue culture We now understand many of the molecular mechanisms that can lead to a cell acquiring resistance to anticancer drugs however we still do not know which mechanisms are those most relevant to the problem of clinical drug resistance Indeed given that many of the

cytotoxic anticancer drugs were discovered by random screening it is clear what features give a clinically useful anticancer drug a sufficient therapeutic index to be of value The aim of Cytotoxic Drug Resistance Mechanisms is to provide protocols that are appropriate for examining the mechanisms of cellular resistance to anticancer cytotoxics in human tumor samples Tumor cell lines have been enormously useful as experimental models of drug resistance mechanisms however they have limitations and we need to address the relevance of such mechanisms in patients tumors Examining drug resistance in tumors is much more problematic than in cell lines
