**Mechanisms of Differentiation** Paul B. Fisher, 1990-08-27 Significant recent advances in cell culture technology now permit a detailed biochemical and molecular analysis of differentiation in both normal and tumor cells. These studies are important in attempting to understand the complex factors involved in normal growth and development as well as the abnormalities associated with carcinogenesis. *Mechanisms of Differentiation Volumes I and II* is comprised of review chapters addressing various topics of current interest in this important area of research. Topics discussed include genes controlling differentiation, changes in gene expression during differentiation, induction of differentiation, induction of differentiation as a mode of action of chemotherapeutic agents, and the effect of cell shape, growth factors, and differentiation modulating agents on the differentiated cell phenotype. *Mechanisms of Differentiation* is valuable to researchers involved in differentiation and development, carcinogenesis, cell biology, chemotherapy, and immunology.

**Molecular Mechanisms In Cellular Growth and Differentiation** A.R. Bellve, 2012-12-02 *Molecular Mechanisms in Cellular Growth and Differentiation* describes the cellular differentiation and development. It emphasizes the pattern formation, specifically the genesis of spatial relationships among the parts of a vertebrate or invertebrate organism, embryonic or adult. Organized into five parts, this book deals with the major steps leading from growth factor receptor interactions through transduction and modulation mechanisms to proliferative response. It also discusses the relation of growth factors and their receptors to oncogenes and to protooncogenes. It also elucidates the roles of growth factors and receptors in cell differentiation and development, particularly in pattern formation. The homeotic systems regulated intracellularly and the two differentiation systems thought to involve sequence specific DNA binding proteins in conjunction with small molecules are also explored.

**Theory of Society, Volume 1** Niklas Luhmann, 2012-10-10 This first volume of Niklas Luhmann's two part final work was initially published in German in 1997. The culmination of his thirty year theoretical project to reconceptualize sociology it offers a comprehensive description of modern society on a scale not attempted since Talcott Parsons. Beginning with an account of the fluidity of meaning and the accordingly high improbability of successful communication, Luhmann analyzes a range of communicative media including language, writing, the printing press and electronic media as well as success media such as money, power, truth and love, all of which structure this fluidity and make communication possible. An investigation into the ways in which social systems produce and reproduce themselves, the book asks what gives rise to functionally differentiated social systems, how they evolve and how social movements, organizations and patterns of interaction emerge. The advent of the computer and its networks, which trigger potentially far reaching processes of restructuring, receive particular attention. A concluding chapter on the semantics of modern society's self description bids farewell to the outdated theoretical approaches of old Europe, that is to ontological, holistic, ethical and critical interpretations of society and argues that concepts such as the nation, the subject and postmodernity are vastly overrated. In their stead, society, long considered a suspicious term by sociologists, is open to all kinds of reification, is defined in purely operational terms. It is the always uncertain answer to the question of what comes next in all areas of communication.
