Mechanisms Of Drug Resistance In Neoplas:

Mechanisms of Drug Resistance in Neoplastic Cells Paul V. Woolley, Kenneth D. Tew, 2013-10-22 Bristol Myers Cancer Symposia Volume 9 Mechanisms of Drug Resistance in Neoplastic Cells provides information on both basic scientific and clinical studies on the causes and implications of tumor cell resistance to common antineoplastic agents The book describes the colon cancer as a model for resistance to antineoplastic drugs mathematical modeling of drug resistance and the mechanism of induced gene amplification in mammalian cells The text also discusses the cellular concomitants of multidrug resistance resistance to alkylating agents and the phosphoprotein and protein kinase C changes in human multidrug resistant cancer cells Novel drugs that affect glutathione metabolism the regulation of genes encoding drug metabolizing enzymes in normal and preneoplastic tissues and the relevance of glutathione S transferases to anticancer drug resistance are also considered The book further tackles the cellular resistance to cyclophosphamide the preclinical and clinical experiences with drug combinations designed to inhibit DNA repair in resistant human tumor cells and the modification of the cytotoxicity of DNA directed chemotherapeutic agents by polyamine depletion The text also demonstrates multidrug resistance and the circumvention of resistance Oncologists molecular biologists biochemists geneticists and pharmacologists will find the book invaluable

New Experimental Modalities in the Control of Neoplasia Prakash Chandra, 2012-12-06 Acquisition of new knowledge about the biological and bio chemical nature of neoplastic cells has led to the design and development of several experimental approaches in the treatment the implication of monoclonal antibodies as a vehicle for the targeted drug delivery and selective destruction of tumor cells immunologic advances in the recognition of some specific events during metastatic growth the role of biological response modifiers in modifying or reversing malignant growth and biochemical advances such as the role of gene amplification in drug resistance and the approaches to the reversal of resistance in drug refractory cancer the role of membranes in designing useful strategies the identification of new enzymic targets in some types of cancer cells and the characterization of metabolically active forms of cytostatic compounds These are the important issues which were addressed in an international NATO Advanced Study Institute ASI attended by scientists from all over the world representing a wide spectrum of scientific disciplines Although the acquired immune deficiency syndrome AIDS is not a malignant disease but the etiological involvement of a retrovirus belonging to the family of human T cell lymphotropic viruses which cause leukemia and lymphomas in man justifies its inclusion in the agenda of this Study Institute Scientific presentations from Drs

Thermotherapy for Neoplasia, Inflammation, and Pain M. Kosaka, T. Sugahara, K.L. Schmidt, E. Simon, 2013-04-17 This book provides a comprehensive overview of the multitude of different forms of thermotherapy in connection with aspects of thermal physiology and cell biology The aim is to elucidate the scientific background of therapeutic actions and to promote effective new applications at the beginning of the 21st century Significant to these purposes is cooperation between experts in the fields of thermal biology hyperthermic oncology rheumatology and

balneology as represented by the editors Emphasis has been placed on a balanced choice of contributions in the hope that this will enable the reader to draw helpful connections between the principles and practice of thermotherapy It is apparent that a wealth of published data exists concerning thermotherapy on the one hand and thermal physiology on the other However in the former field empirical aspects of therapeutic usefulness prevail while in the latter aspects of basic science are in the foreground Accordingly the sources where published data may be found are quite different and as a consequence many findings of potential mutual interest published in medical journals have gone unnoticed by readers of physiological journals and vice versa It is hoped that this book will bridge the gap and encourage researchers efforts to integrate the available knowledge to attain optimal coordination of clinical and theoretical aspects Molecular Mechanisms of Pathogen-Driven Infectious and Neoplastic Diseases Giulia De Falco,Davide Gibellini,Pier Paolo Piccaluga,Paul Gerard Murray,Sam Mbulaiteye,2021-07-21 Biomedical Index to PHS-supported Research: pt. Report ,1971 *Variation, Senescence, and Neoplasia in Cultured Somatic Cells* John W. Littlefield,1976 Aging and cancer may be manifestations of genetic or epigenetic changes in somatic cells Through research laboratory analysis of these related processes has become possible Cells can be removed from the body kept warm in laboratory glassware nourished by artificial solutions and studied for years or even decades Two types of cultures have emerged Primary cultures grown from cells obtained directly from living animals may grow well for generations but ultimately cease to divide Established cultures on the other hand may grow and divide indefinitely It is a striking fact that most if not all established cultures consist of cells that are heteroploid having an abnormal chromosome complement that may include structural rearrangements as well as abnormalities of chromosome number Most established cultures are also neoplastic on behavior and morphology in this they resemble cancers and established cultures are in fact often grown from cancer cells Interest in the role of chromosomes in neoplasia has recently been overshadowed by an emphasis on tumor viruses This book should reawaken the former interest It will also arouse new interest in the role of epigenetic mechanisms of animal cells in contrast to the classic genetic processes As Dr John Littlefield writes The relationship between the overcoming of senescence the appearance of heteroploidy and the acquisition of neoplastic qualities is not yet clear but it is of such great theoretical and practical importance as to demand attention and new ideas *Clinical Pharmacology of Anti-neoplastic Drugs* H. M. Pinedo,1978 Gene Therapy for Neoplastic Diseases Brian Edward Huber,John S. Lazo,1994 This text discusses advances in applications of gene therapy for the treatment of neoplastic diseases It contains discussions of gene therapy strategies the construction of artificial genes and gene delivery systems Ethical regulatory and public policy issues in gene therapy are also considered *Anticancer Research* ,1998 **Pediatric Neoplasia** Alexander Craig Mackinnon,2012-10-26 With each chapter written by expert specialists this publication reflects the key recent advances in molecular pathology that are contributing to the development of pediatric oncology The book is structured according to organ systems for ease of reference Hospital Practice ,1967
