To develop is to change. Without a good understanding of the mechanisms that produce change, no comprehensive understanding of development is possible. The difficulty of identifying such mechanisms is well known and has often been noted (e.g. Flavell 1984; Kuhn 1984; Miller 1983). Not as well known or as often noted, however, is the substantial progress that has been made in the past few years in establishing the effects that particular mechanisms produce and in specifying how the mechanisms operate.

Here I review some of the most promising recent ideas about change mechanisms that contribute to cognitive development. I hope that bringing together in a single context a number of these relatively well-worked-out examples will facilitate further advances in theorizing about change mechanisms.

Sloutsky,2010      The Mechanisms of Perception Jean Piaget,2013-07-04 First published in 2006 This work represents an attempt to synthesise studies on the development of perception which Piaget started twenty or so years ago when the Faculte des Sciences de Geneve appointed him to the Chair of Experimental Psychology and Director of the Psychological Laboratory Most of the studies to be reported have already appeared in the Archives de Psychologie under the general title of Recherches sur le Developpement des Perceptions however more than fifteen studies which have not been published and which we shall deal with in the following pages      **A Dynamic Systems Approach to the Development of Cognition and Action** Esther Thelen,Linda B. Smith,1994 A Dynamic Systems Approach to the Development of Cognition and Action presents a comprehensive and detailed theory of early human development based on the principles of dynamic systems theory Beginning with their own research in motor perceptual and cognitive development Thelen and Smith raise fundamental questions about prevailing assumptions in the field They propose a new theory of the development of cognition and action unifying recent advances in dynamic systems theory with current research in neuroscience and neural development In particular they show how by processes of exploration and selection multimodal experiences form the bases for self organizing perception action categories Thelen and Smith offer a radical alternative to current cognitive theory both in their emphasis on dynamic representation and in their focus on processes of change Among the first attempt to apply complexity theory to psychology they suggest reinterpretations of several classic issues in early cognitive development The book is divided into three sections The first discusses the nature of developmental processes in general terms the second covers dynamic principles in process and mechanism and the third looks at how a dynamic theory can be applied to enduring puzzles of development Cognitive Psychology series      **Transition Mechanisms in Child Development** Anik de Ribaupierre,1989-09-29 This collection brings together work in the longitudinal study of the interaction of cognition and emotion in individual development Leading international researchers in developmental psychology have prepared chapters that examine transition mechanisms in areas including cognitive and memory development language development social and emotional development and motor development in children      **Handbook of Psychology, Developmental Psychology** Irving B. Weinert, Wolfgang Schneider, 1995 Research on memory development has accumulated over the past few years Given the number of relevant publications in the field it becomes increasingly difficult to keep track of major advances in specific areas of memory development This book illustrates 2 purposes to permit experts in the various subdomains of research in memory development to summarize recent findings concerning the respective roles of capacity strategies and knowledge in the acquisition of memory skills and to discuss cross cutting topics such as the influence of individual differences practical and educational implications and the potential of
