Organization of the United Nations, Yang, M., Jiang, S., 2023-01-20 Sustainable agricultural mechanization covers all levels of farming and processing technologies and takes into consideration technological economic social environmental and cultural aspects when contributing to the sustainable development of agrifood systems This publication strives to comprehensively and systematically summarize the status and strategies of China's agricultural mechanization development its impacts experiences and practices and business models Furthermore the publication investigates the related investment and policy recommendations to reach the goal of agricultural and rural modernization by 2035 to drive smallholder farmers to enter modern agriculture and to achieve sustainable development It is estimated that by 2035 agricultural production in China will predominantly be mechanized The concept of integrating mechanization and digitalization will be applied to agricultural mechanization management and operation monitoring and services and mechanization will comprehensively support all agricultural and rural modernization The development of sustainable agricultural mechanization in China provides cases and examples of innovations with global value not only for developing countries but in particular for middle income countries and emerging countries Report of the United States Government to the Food and Agriculture Organization of the United Nations, 1967

**Defending Beef** Nicolette Hahn Niman, 2014-10-31 For decades it has been nearly universal dogma among environmentalists and health advocates that cattle and beef are public enemy number one But is the matter really so clear cut Hardly argues environmental lawyer turned rancher Nicolette Hahn Niman in her new book *Defending Beef* The public has long been led to believe that livestock especially cattle erode soils pollute air and water damage riparian areas and decimate wildlife populations In *Defending Beef* Hahn Niman argues that cattle are not inherently bad for either the Earth or our own nutritional health In fact properly managed livestock play an essential role in maintaining grassland ecosystems by functioning as surrogates for herds of wild ruminants that once covered the globe Hahn Niman argues that dispersed grass fed small scale farms can and should become the basis for American food production replacing the factory farms that harm animals and the environment The author a longtime vegetarian goes on to dispel popular myths about how eating beef is bad for our bodies She methodically evaluates health claims made against beef demonstrating that such claims have proven false She shows how foods from cattle milk and meat particularly when raised entirely on grass are healthful extremely nutritious and an irreplaceable part of the world's food system Grounded in empirical scientific data and with living examples from around the world *Defending Beef* builds a comprehensive argument that cattle can help to build carbon sequestering soils to mitigate climate change enhance biodiversity help prevent desertification and provide invaluable nutrition *Defending Beef* is simultaneously a book about big ideas and the author's own personal tale she starts out as a skeptical vegetarian and eventually becomes an enthusiastic participant in environmentally sustainable ranching While no single book can definitively answer the thorny question of how to feed the Earth's growing population *Defending Beef* makes the case that whatever the world's future food system looks like cattle and beef can and must be part of the solution Livestock and the Environment
