Proceedings of the 1st mini symposium of the Roman Number Theory Association Marina Monsurrò, Francesco Pappalardi, Valerio Talamanca, 2016-05-02 This volume contains the proceeding of the first miny symposium of the Roman Number Theory Association The conference was held on May 7 2015 at the Universit Europea di Roma and it represented the first initiative of the association As organizers of the symposium and promoters of the constituent association we thank the speakers for the high scientific contribution offered and the scribas who wrote these notes We also thank the Universit Europea di Roma and the Universit Roma Tre for funding the event This first conference whose proceedings are collected here is evidence of our goal to be a key player in the development of a strong Roman community of number theorists and by this we do not only intend to foster a specific scientific program but also and more importantly to create a framework of opportunities for scientific cooperation for those interested in number theory Among these opportunities we can enlist the Scriba project as well as international cooperation with developing countries and the support of young researcher in number theory with special regards to those coming from developing country The association even tough founded and based in Rome has an international spirit and we strongly believe in international cooperation In an effort to make the Roman Number Theory Association work efficiently and achieve its multiple goals we chose to turn it into an NGO The proceedings of a conference usually collect the most significant contributions presented during the conference itself The manuscripts were approved by the speakers and lastly reviewed by the editors of the present volume

Transcendental Numbers Andrei B. Shidlovskii, 2011-06-01 The series is devoted to the publication of monographs and high level textbooks in mathematics mathematical methods and their applications Apart from covering important areas of current interest a major aim is to make topics of an interdisciplinary nature accessible to the non specialist The works in this series are addressed to advanced students and researchers in mathematics and theoretical physics In addition it can serve as a guide for lectures and seminars on a graduate level The series de Gruyter Studies in Mathematics was founded ca 30 years ago by the late Professor Heinz

Bauer and Professor Peter Gabriel with the aim to establish a series of monographs and textbooks of high standard written by scholars with an international reputation presenting current fields of research in pure and applied mathematics While the editorial board of the Studies has changed with the years the aspirations of the Studies are unchanged In times of rapid growth of mathematical knowledge carefully written monographs and textbooks written by experts are needed more than ever not least to pave the way for the next generation of mathematicians In this sense the editorial board and the publisher of the Studies are devoted to continue the Studies as a service to the mathematical community Please submit any book proposals to Niels Jacob

Ten Lectures on the Interface Between Analytic Number Theory and Harmonic Analysis

Hugh L. Montgomery, 1994 This book contains lectures presented by Hugh L Montgomery at the NSF CBMS Regional Conference held at Kansas State University in May 1990 The book focuses on important topics in analytic number theory that involve ideas from harmonic analysis One valuable aspect of the book is that it collects material that was either unpublished or that had appeared only in the research literature This book would be an excellent resource for harmonic analysts interested in moving into research in analytic number theory In addition it is suitable as a textbook in an advanced graduate topics course in nu

The Development of the Number Field Sieve Arjen K. Lenstra, Hendrik W. Jr. Lenstra, 2006-11-15 The number field sieve is an algorithm for finding the prime factors of large integers It depends on algebraic number theory Proposed by John Pollard in 1988 the method was used in 1990 to factor the ninth Fermat number a 155 digit integer The algorithm is most suited to numbers of a special form but there is a promising variant that applies in general This volume contains six research papers that describe the operation of the number field sieve from both theoretical and practical perspectives Pollard's original manuscript is included In addition there is an annotated bibliography of directly related literature

Reviews in Number Theory, 1984-96, 1997 These six volumes include approximately 20 000 reviews of items in number theory that appeared in Mathematical Reviews between 1984 and 1996 This is the third such set of volumes in number theory The first was edited by W J LeVeque and included reviews from 1940 1972 the second was edited by R K Guy and appeared in 1984

Computational Perspectives on Number Theory Duncan A. Buell, Jeremy T. Teitelbaum, A. O. L. The Mathematics of Paul Erdős II Ronald L. Graham, Jaroslav Nešetřil, Steve Butler, 2013-08-04 This is the most

comprehensive survey of the mathematical life of the legendary Paul Erdős 1913-1996 one of the most versatile and prolific mathematicians of our time For the first time all the main areas of Erdős' research are covered in a single project Because of overwhelming response from the mathematical community the project now occupies over 1000 pages arranged into two volumes These volumes contain both high level research articles as well as key articles that survey some of the cornerstones of Erdős' work each written by a leading world specialist in the field A special chapter Early Days rare photographs and art related to Erdős complement this striking collection A unique contribution is the bibliography on Erdős' publications the most comprehensive ever published This new edition dedicated to the 100th anniversary of Paul Erdős' birth contains updates on many of the articles from the two volumes of the first edition several new articles from prominent mathematicians a new introduction and more biographical information about Paul Erdős with an updated list of publications The second volume contains chapters on graph theory and combinatorics extremal and Ramsey theory and a section on infinity that covers Erdős' research on set theory All of these chapters are essentially updated particularly the extremal theory chapter that contains a survey of flag algebras a new technique for solving extremal problems

The Mathematics of Paul Erdős II Ronald L. Graham, Jaroslav Nešetřil, 2012-12-06 In 1992 when Paul Erdős was awarded a Doctor Honoris Causa by Charles University in Prague a small conference was held bringing together a distinguished group of researchers with interests spanning a variety of fields related to Erdős' own work At that gathering the idea occurred to several of us that it might be quite appropriate at this point in Erdős' career to solicit a collection of articles illustrating various aspects of Erdős' mathematical life and work The response to our solicitation was immediate and overwhelming and these volumes are the result Regarding the organization we found it convenient to arrange the papers into six chapters each mirroring Erdős' holistic approach to mathematics Our goal was not merely a random collection of papers but rather a thoroughly edited volume composed in large part by articles explicitly solicited to illustrate interesting aspects of Erdős and his life and work Each chapter includes an introduction which often presents a sample of related Erdős problems in his own words All these sometimes lengthy introductions were written jointly by editors We wish to thank the nearly 70 contributors for their outstanding efforts and their patience In particular we are grateful to Bela Bollobás for his extensive documentation of Paul Erdős' early years and mathematical high points in the first part of this volume our other authors are acknowledged in their respective chapters We also want to thank A Bondy, G Hahn, I

Analytic Number Theory William Duke, Yuri Tschinkel, 2007

Articles in this volume are based on talks given at the Gauss Dirichlet Conference held in Gottingen on June 20-24, 2005. The conference commemorated the 150th anniversary of the death of C. F. Gauss and the 200th anniversary of the birth of J. L. Dirichlet. The volume begins with a definitive summary of the life and work of Dirichlet and continues with thirteen papers by leading experts on research topics of current interest in number theory that were directly influenced by Gauss and Dirichlet. Among the topics are the distribution of primes, long arithmetic progressions of primes and small gaps between primes, class groups of binary quadratic forms, various aspects of the theory of L-functions, the theory of modular forms, and the study of rational and integral solutions to polynomial equations in several variables. Information for our distributors: Titles in this series are co-published with the Clay Mathematics Institute, Cambridge, MA.
