This book gathers outstanding papers presented at the European Conference on Numerical Mathematics and Advanced Applications ENUMATH 2019. The conference was organized by Delft University of Technology and was held in Egmond aan Zee, the Netherlands, from September 30 to October 4, 2019. Leading experts in the field presented the latest results and ideas regarding the design, implementation, and analysis of numerical algorithms as well as their applications to relevant societal problems. ENUMATH is a series of conferences held every two years to provide a forum for discussing basic aspects and new trends in numerical mathematics and scientific and industrial applications, all examined at the highest level of international expertise. The first ENUMATH was held in Paris in 1995, with successive installments at various sites across Europe, including Heidelberg 1997, Jyväskylä 1999, Ischia Porto 2001, Prague 2003, Santiago de Compostela 2005, Graz 2007, Uppsala 2009, Leicester 2011, Lausanne 2013, Ankara 2015, and Bergen 2017. Proceedings of the 3rd European Conference, Numerical Mathematics and Advanced Applications Pekka Neittaanmäki, Timo Tiihonen, Pasi Tarvainen, 2000. This volume contains major lectures given at Enumath 99, the 3rd European Conference on Numerical Mathematics and Advanced Applications. The Enumath conferences were established in 1995 to provide a forum for discussing current topics in numerical mathematics. They convene leading experts and young scientists with special emphasis on contributions from Europe. Recent results and new trends are discussed in the analysis of numerical algorithms as well as their application to challenging scientific and industrial problems. The topics of Enumath 99 included finite element methods, a posteriori error control, and adaptive mesh design, non-matching grids, least squares methods for partial differential equations, boundary element methods, and optimization in partial differential equations. Apart from theoretical aspects, a major part of the conference was devoted to numerical methods in interdisciplinary applications such as problems in computational fluid electrodynamics, telecommunications, software, as well as visualization. *Numerical Mathematics and Advanced Applications ENUMATH 2015* Bülent Karasözen, Murat Manguoğlu, Münevver Tezer-Sezgin, Serdar Göktepe, Ömür Uğur, 2016-11-09. *Numerical Mathematics and Advanced*

*Applications* F. Brezzi, A. Buffa, S. Corsaro, A. Murli, 2012-12-06 Scientific computing is a fast growing and fast changing area whose applications to various branches of science engineering medicine economics and others are increasing in number and relevance every day There are two main reasons among others that make scientific computing change so rapidly One is the increasing number of different research areas beginning to make use of numerical simulation from nanotechnology to genomics from computer aided diagnosis and operations in medical applications which involve often complete simulations of parts of the human body to economics and finance Each new application and each new aspect of earlier applications draws heavily on the know how that has been acquired on other problems with similar mathematical features It has to be pointed out that the lofty perspective of mathematics succeeds quite often in finding connections among very different phenomena that turn out in the end to share the same mathematical and numerical structure In turn new applications contribute to the cross fertilization by sending back new interpretations and suggestions which are often useful in more classical applications All this creates a resonance effect that contributes greatly to the growth rate of the whole field Numerical Mathematics

of numerical and computational mathematics and scientific computing is permanently growing. There is an increasing number of different research areas where numerical simulation is necessary. Let us mention fluid dynamics, continuum mechanics, electromagnetism, phase transition, cosmology, medicine, economics, finance, etc. The success of applications of numerical methods is conditioned by changing its basic instruments and looking for new appropriate techniques adapted to new problems as well as new computer architectures. The ENUMATH conferences were established in order to provide a forum for discussion of current topics of numerical mathematics. They seek to convene leading experts and young scientists with special emphasis on contributions from Europe.
