Ball,2015-10-08 This is a meticulously detailed chronological record of significant events in the history of medical informatics and their impact on direct patient care and clinical research offering a representative sampling of published contributions to the field The History of Medical Informatics in the United States has been restructured within this new edition reflecting the transformation medical informatics has undergone in the years since 1990 The systems that were once exclusively institutionally driven hospital multihospital and outpatient information systems are today joined by systems that are driven by clinical subspecialties nursing pathology clinical laboratory pharmacy imaging and more At the core is the person not the clinician not the institution whose health all these systems are designed to serve A group of world renowned

The Nursing Informatics Implementation Guide Eleanor Callahan Hunt, Sara Breckenridge Sproat, Rebecca Rutherford Kitzmiller, 2013-03-09 Health institutions are investing in and fielding information technology solutions at an unprecedented pace. With the recommendations from the Institute of Medicine around information technology solutions for patient safety, mandates from industry groups such as Leapfrog about using information systems to improve health care, and the move toward evidence-based practice, health institutions cannot afford to retain manual practices. The installation of multi-million-dollar computerized health systems represents the very lifeblood of contemporary clinical operations and a crucial link to the financial viability of institutions. Yet the implementation of health information systems is exceptionally complex, expensive, and often just plain messy. The need for improvement in the art and science of systems implementation is clear up to 70-80% of information technology installations fail. The reasons are multifaceted, ranging from the complexity of the diverse workflows being computerized, the intricate nature of health organizations, the knowledge and skills of users, to other reasons such as strategies for obtaining key executive support, weaving through the politics peculiar to the institution, and technical facets including the usability of systems. Thus, the art and science of successfully implementing systems remains deeply layered in elusiveness. Still, given the pervasiveness of system implementations and the importance of the outcomes, this is a critical topic, especially for nurses and informatics nurse specialists.
