Kingsland, 2005 In the 1890s several initiatives in American botany converged The creation of new institutions such as the New York Botanical Garden coincided with radical reforms in taxonomic practice and the emergence of an experimental program of research on evolutionary problems Sharon Kingsland explores how these changes gave impetus to the new field of ecology that was defined at exactly this time She argues that the creation of institutions and research laboratories coupled with new intellectual directions in science were crucial to the development of ecology as a discipline in the United States The main concern of ecology the relationship between organisms and environment was central to scientific studies aimed at understanding and controlling the evolutionary process Kingsland considers the evolutionary context in which ecology arose especially neo Lamarckian ideas and the new mutation theory and explores the relationship between scientific research and broader theories about social progress and the evolution of human civilization By midcentury American ecologists were leading the rapid development of ecosystem ecology and society in the postwar context foreshadowing the environmental critiques of the 1960s As the ecosystem concept evolved so too did debates about how human ecology should be incorporated into the biological sciences Kingsland concludes with an examination of ecology in the modern urban environment reflecting on how scientists are now being challenged to produce innovative responses to pressing problems *The Evolution of American Ecology 1890 2000* offers an innovative study not only of the scientific landscape in turn of the century America but of current questions in ecological science **A Centennial History of the Ecological Society of America** Frank N.

**Pioneers Of Ecological Humanism** Morris Brian Morris, 2020-07-16 e Brian Morris blazed a lot of trails. He is a scholar of genuine daring and great humanity and his work deserves to be read and debated for a very long time to come. e David Graeber author of *Debt: The First 5,000 Years*. In our world of ecological catastrophe and social crisis, some roundly condemn modern civilisation as the source of our Promethean predicament. What can follow is a rejection of humanism, science, and the City, and a turn to either nostalgic primitivism or esoteric spirituality. But do we really need to flee the city for the woods in order to build a free society? In this triple intellectual biography, Brian Morris lucidly discusses three intellectual giants who made an enormous though often overlooked contribution to modern ecology: Lewis Mumford, Rene Dubos, and Murray Bookchin. Morris argues that they have forged a third way beyond both industrialism and anti-modernism: ecological humanism, also known as social ecology, a tradition that embraces both ecological realities and the ethical and cultural wealth of humanism. In examining their thought, Professor Morris paves the way for fresh debate on ecology, charting an optimistic vision for the profound reharmonisation of nature and culture, as well as the ecological, egalitarian, and democratic transformation of our cities and society. Essential reading for anyone with an interest or active role in ecology or philosophy and their associated disciplines.

*Pioneers of Ecological Humanism* is written in a clear and refreshingly direct style that will appeal to academics, activists, and armchair ecologists alike. Leaving school at the age of fifteen, Brian Morris had a varied career: foundry worker, seaman, and tea planter in Malawi, before becoming a university teacher. Now Emeritus Professor of Anthropology at Goldsmiths College, University of London, he is the author of numerous articles and books on ethnobotany, religion, and symbolism in hunter-gatherer societies, and concepts of the individual. His books include *Richard Jefferies and the Ecological Vision* (2006), *Religion and Anthropology: A Critical Introduction* (2006), *Insects and Human Life* (2004), and *Kropotkin: The Politics of Community* (2004). Black Rose Books is also the publisher of his *Bakunin: The Philosophy of Freedom* (1993) and the forthcoming *Anarchist Miscellany*. *Pioneers of Ecological Humanism* is essential reading for anyone concerned with these issues. Conversant with the history of ideas, Morris places Bookchin especially in a context that has eluded other authors who have treated his work. His writing style is lucid and accessible. Highly recommended.

view of how history has informed management research with a focus on organization theory and strategy More specifically the volume provides an overview of how the relationship between history and management scholarship has evolved from the 19th century until today focusing mainly on the post World War II period and systematically surveys the kind of research programs within organization theory and strategy that have used historical data and or history as a theoretical construct while also identifying the remaining blind spots As a whole it offers a kind of roadmap for management scholars and historians to situate their research and hopefully find new roads for others to travel The book is intended for anybody conducting or planning to conduct historical research within management and organization studies and aims in particular at becoming a standard feature of research methods courses in business schools and departments of management

Integrating Sustainable Agriculture, Ecology, and Environmental Policy Richard Olson, 2018-05-02 Find an interdisciplinary view of sustainable agriculture that emphasizes the potential contributions of ecology to agricultural sustainability in this groundbreaking book Integrating Sustainable Agriculture Ecology and Environmental Policy explores how ecological knowledge applied as part of a multidisciplinary effort can be used to design a sustainable and environmentally sound agriculture A more ecologically based agriculture can increase production efficiency and decrease environmental impacts but hard choices regarding population control energy conservation and land use must still be made This interdisciplinary approach ensures that the results are beneficial to all components for example an ecologically based management scheme which bankrupts the farmer is not considered a viable option for sustainable agriculture These thought provoking chapters are an excellent introduction to the contributions of ecological principles to an environmentally sound sustainable agriculture This multidisciplinary examination provides readers interested in agriculture with a valuable introduction to related work in other fields including ecology and economics Agronomists ecologists educators and policymakers will find essential information on diverse topics including the definition and measurement of ecological sustainability in agriculture landscape ecology and the design of sustainable agricultural landscapes soil ecology as a foundation for sustainable agriculture Federal agricultural policies as incentives or deterrent to sustainable agriculture applying farming systems research and extension to sustainable agriculture population growth and other threats to sustainable agriculture environmental policies and their effects on sustainable agriculture the role of precollege education in developing sustainable agriculture *Growing Up with Science* Cavendish Square Publishing LLC, 2006 Volume fifteen of a seventeen volume alphabetically arranged encyclopedia contains approximately five hundred articles introducing key aspects of science and technology **Bibliographies and Literature of Agriculture** ,1990 **Earth Repair** Marcus Hall, 2005 Just as the restoration of Michelangelo's Last Judgment sparked enormous controversy in the art world so are environmental restorationists intensely divided when it comes to finding ways to rehabilitate damaged ecosystems Although environmental restoration is quickly becoming a widespread pursuit debate over the methods and goals of this endeavor often halts

progress The same question confronts artistic and environmental restorationists Which systems need restoring and to what states should they be restored In *Earth Repair A Transatlantic History of Environmental Restoration* Marcus Hall explores the answer to this question while offering an alternative to the usual narrative of humans disrupting and spoiling the earth Hall's purpose is not to deny that humans have done lasting damage but to show that those who believed in restoration did not always agree on what they wanted to restore or how or to what form With guidance from the pioneer conservationist George Perkins Marsh the reader travels between the United States and Italy to see that restoration has taken many forms over the past two hundred years from maintaining and repairing to gardening and naturalizing By contrasting land management in these two countries and elsewhere *Earth Repair* clarifies different meanings of restoration shows how such meanings have changed through time and place and suggests how restorationists can apply these insights to their own practices

**Stewardship Across Boundaries** Richard L. Knight, Peter Landres, 2013-06-17 Every piece of land no matter how remote or untrammelled has a boundary While sometimes boundary lines follow topographic or biological features more often they follow the straight lines of political dictate and compromise Administrative boundaries nearly always fragment a landscape resulting in loss of species that must disperse or migrate across borders increased likelihood of threats such as alien species or pollutants and disruption of natural processes such as fire Despite the importance and ubiquity of boundary issues remarkably little has been written on the subject *Stewardship Across Boundaries* fills that gap in the literature addressing the complex biological and socioeconomic impacts of both public and private land boundaries in the United States With contributions from natural resource managers historians environmentalists political scientists and legal scholars the book develops a framework for understanding administrative boundaries and their effects on the land and on human behavior examines issues related to different types of boundaries wilderness commodity recreation private public presents a series of case studies illustrating the efforts of those who have cooperated to promote stewardship across boundaries synthesizes the broad complexity of boundary related issues and offers an integrated strategy for achieving regional stewardship *Stewardship Across Boundaries* should spur open discussion among students scientists managers and activists on this important topic It demonstrates how legal social and ecological conditions interact in causing boundary impacts and why those factors must be integrated to improve land management It also discusses research needs and will help facilitate critical thinking within the scientific community that could result in new strategies for managing boundaries and their impacts

Cohen, 2023-10-16 Tells the story of Helaine Victoria Press the first publisher of women's history postcards Nation-States and the Global Environment Erika Marie Bsumek, David Kinkela, Mark Atwood Lawrence, 2013-04-02 Hardly a day passes without journalists policymakers academics or scientists calling attention to the worldwide scale of the environmental crisis confronting humankind While climate change has generated the greatest alarm in recent years other global problems desertification toxic pollution species extinctions drought and deforestation to name

just a few loom close behind The scope of the most pressing environmental problems far exceeds the capacity of individual nation states much less smaller political entities To compound these problems economic globalization the growth of non governmental activist groups and the accelerating flow of information have fundamentally transformed the geopolitical landscape Despite the new urgency of these challenges however they are not without historical precedent As this book shows nation states have long sought agreements to manage migratory wildlife just as they have negotiated conventions governing the exploitation of rivers and other bodies of water Similarly nation states have long attempted to control resources beyond their borders to impose their standards of proper environmental exploitation on others and to draw on expertise developed elsewhere to cope with environmental problems at home This collection examines this little understood history providing case studies and context to inform ongoing debates

**Early Life History and Recruitment in Fish Populations** R.C. Chambers, Edward A. Trippel, 2012-12-06 Many of the processes influencing recruitment to an adult fish population or entry into a fishery occur very early in life The variations in life histories and behaviours of young fish and the selective processes operating on this variation ultimately determine the identities and abundance of survivors This important volume brings together contributions from many of the world s leading researchers from the field of fish ecology The book focuses on three major themes of pressing importance in the analysis of the role that the early life history of fishes plays in the number and quality of recruits the selective processes at play in their early life history the contributions of early life history to the understanding of recruitment
