Kavale, Steven R. Forness, 2012-12-06 The category of learning disabilities continues to be among the most contentious in special education Much of the debate and dissent emanates from a lack of understanding about its basic nature The failure to evolve a comprehensive and unified perspective about the nature of learning disabilities has resulted in the concept being lost The loss is best illustrated through the failure to answer this seemingly simple question What is a learning disability Using historical empirical theoretical conceptual and philosophical analyses this volume explores a number of problems and issues facing the field of learning disabilities The chapters cover historical influences definitional problems primary characteristics assessment practices

theoretical development major themes research and measurement models and long term outcomes The goal is to explicate the nature of learning disabilities by analyzing what it was supposed to be what it has become and what it might be A predominant theme running through this text is the necessity for the field of learning disabilities to regain integrity by recapturing its essence

Theory and Design is a compilation of nine essays dealing with a problem central to today's complex world. How can people best live and work with others who come from very different cultural backgrounds? The major focus of the nine essays in this book is the experience of living and working for long periods in other cultures. The book also focuses on other types of cross-cultural experiences such as majority-minority group relations, training and preparation, and integration. There are analyses of possible experiences people may have such as stress during adjustments. Other authors in this book address the benefits of intercultural action and integration into a country's educational system. International education is seen to benefit through a greater attention to face-to-face cross-cultural experience. The first seven essays are good descriptions of intercultural behavior and training, while Chapter 8 is an evaluation of cross-cultural training. The last chapter describes the atlas of affective meanings containing 620 concepts from 30 languages/culture communities for use in intercultural training and education. Behavioral and social scientists, trainers, and cross-cultural scientists, overseas businessmen, foreign students, diplomats, immigrants, and other people who work in different cultures will find this handbook very helpful. **Research**

Issues in Learning Disabilities Sharon Vaughn, Candace S. Bos, 2012-12-06 In this chapter we described issues in conducting intervention research with students with learning disabilities on the secondary level. We maintained that interventions should be well grounded in theories of learning as well as characterizations of learning disabilities. Pressley and Scruggs that they should first be conducted in a series of highly controlled laboratory-like experiments to carefully assess the potential utility of the intervention and that if the intervention is successful in highly controlled settings, it should then be evaluated in classroom applications. We maintained that research designs should evolve as the research questions become more applied and that the results of laboratory research should be used to support the findings of classroom applications. Finally, we described several research designs that we have found useful in conducting classroom intervention research. There is a great deal more to conducting intervention research, of course, than experimental or quasi-experimental design. Intervention strategies likely to be effective must be identified; relevant literature must be reviewed; experimental materials must be developed; and cooperative schools, teachers, parents, and students must be located. Nevertheless, inadequate research designs can invalidate the best and most successful efforts in all of these areas, while effective and practical research designs can do much to document the best practices and advance our knowledge of effective interventions with students with learning disabilities. **References** Brigham F J, Scruggs T E, Mastropieri M A, 1992 Dictionary of Theories, Laws, and Concepts in Psychology Jon Roedelein, 1998-10-28 Fully cross-referenced and source-referenced, this dictionary contains over 1200 entries consisting of terms concerning laws, theories, hypotheses, doctrines, principles, and effects in early and contemporary psychological literature. Each entry consists of the definition, description of the term, with commentary followed by a number of cross-referenced related terms and by chronologically ordered source references to indicate the evolution of the term. An appendix provides supplementary material on many laws and theories not included in the dictionary itself and
