Place Matters Dawn J. Wright, Astrid J. Scholz, 2005 Although the ocean provides living space for about 97 percent of life on Earth less than 5 percent of the ocean below the surface has actually been seen let alone explored Now using the geographic information system GIS marine scientists are gaining new insights into a once mysterious world A technologically sophisticated database information management and display system GIS holds tremendous potential for mapping interpreting and managing ocean environments from the seafloor to the seafloor to the shoreline Place Matters explores how marine GIS is contributing to the understanding management and conservation of the shores and ocean of the Pacific Northwest which is becoming a hotbed of marine GIS development and applications as scientists expand the use of this cutting edge technology to a variety of ocean science policy and management issues Using these geospatial databases and tools scientists resource managers and conservationists often in collaboration are making advances in the way that data are collected documented used shared and saved The contributors to Place Matters show how together they are using GIS to handle and exploit present and future data streams from observatories experiments numerical models simulations and other sources yielding fresh insights into oceanographic ecological and socioeconomic conditions of the marine environment The book begins with a conceptual framework laying out selected methods and models for conservation based marine GIS Chapters in the second section describe working examples of marine GIS tools and large scale implementations The final section focuses on the use of GIS by environmental advocacy and local citizens organizations A companion Web site includes GIS maps and databases as well as extensive Web based resources with its unique focus on the use of GIS to solve marine conservation problems Place Matters offers an important new resource for all who study and work to protect the world's oceans
