Networks of the Future Mahmoud Elkhodr,Qusay F. Hassan,Seyed Shahrestani,2017-10-16 With the ubiquitous diffusion of the IoT Cloud Computing 5G and other evolved wireless technologies into our daily lives the world will see the Internet of the future expand ever more quickly Driving the progress of communications and connectivity are mobile and wireless technologies including traditional WLANs technologies and low ultra power short and long range technologies

These technologies facilitate the communication among the growing number of connected devices leading to the generation of huge volumes of data. Processing and analysis of such big data brings about many opportunities as well as many challenges such as those relating to efficient power consumptions, security, privacy management and quality of service. This book is about the technologies, opportunities and challenges that can drive and shape the networks of the future. Written by established international researchers and experts, *Networks of the Future* answers fundamental and pressing research challenges in the field including architectural shifts, concepts, mitigation solutions and techniques and key technologies in the areas of networking. The book starts with a discussion on Cognitive Radio (CR) technologies as promising solutions for improving spectrum utilization and also highlights the advances in CR spectrum sensing techniques and resource management methods. The second part of the book presents the latest developments and research in the areas of 5G technologies and Software Defined Networks (SDN). Solutions to the most pressing challenges facing the adoption of 5G technologies are also covered and the new paradigm known as Fog Computing is examined in the context of 5G networks. The focus next shifts to efficient solutions for future heterogeneous networks. It consists of a collection of chapters that discuss self-healing solutions dealing with Network Virtualization, QoS in heterogeneous networks and energy efficient techniques for Passive Optical Networks and Wireless Sensor Networks. Finally, the areas of IoT and Big Data are discussed including the latest developments and future perspectives of Big Data and the IoT paradigms.

Developing Networks using Artificial Intelligence Haipeng Yao, Chunxiao Jiang, Yi Qian, 2019-04-26. This book mainly discusses the most important issues in artificial intelligence aided future networks such as applying different ML approaches to investigate solutions to intelligently monitor, control and optimize networking. The authors focus on four scenarios of successfully applying machine learning in network space. It also discusses the main challenge of network traffic intelligent awareness and introduces several machine learning based traffic awareness algorithms such as traffic classification, anomaly traffic identification and traffic prediction. The authors introduce some ML approaches like reinforcement learning to deal with network control problem in this book. Traditional works on the control plane largely rely on a manual process in configuring forwarding which cannot be employed for today's network conditions. To address this issue, several artificial intelligence approaches for self-learning control strategies are introduced. In addition, resource management problems are ubiquitous in the networking field such as job scheduling, bitrate adaptation in video streaming and virtual machine placement in cloud computing. Compared with the traditional with-box approach, the authors present some ML methods to solve the complexity network resource allocation problems. Finally, semantic comprehension function is introduced to the network to understand the high-level business intent in this book.

With Software Defined Networking (SDN), Network Function Virtualization (NFV), 5th Generation Wireless Systems (5G) development, the global network is undergoing profound restructuring and transformation. However, with the improvement of the flexibility and scalability of the networks as well as the ever-increasing complexity of networks, makes effective monitoring, overall control

and optimization of the network extremely difficult Recently adding intelligence to the control plane through AI ML become a trend and a direction of network development This book s expected audience includes professors researchers scientists practitioners engineers industry managers and government research workers who work in the fields of intelligent network Advanced level students studying computer science and electrical engineering will also find this book useful as a secondary textbook The Internet and Its Protocols Adrian Farrel,2004-06-02 The view presented in The Internet and Its Protocols is at once broad and deep It covers all the common protocols and how they combine to create the Internet in its totality More importantly it describes each one completely examining the requirements it addresses and the exact means by which it does its job These descriptions include message flows full message formats and message exchanges for normal and error operation They are supported by numerous diagrams and tables This book s comparative approach gives you something more valuable insight into the decisions you face as you build and maintain your network network device or network application Author Adrian Farrel s experience and advice will dramatically smooth your path as you work to offer improved performance and a wider range of services Provides comprehensive in depth and comparative coverage of the Internet Protocol both IPv4 and IPv6 and its many related technologies Written for developers operators and managers and designed to be used as both an overview and a reference Discusses major concepts in traffic engineering providing detailed looks at MPLS and GMPLS and how they control both IP and non IP traffic Covers protocols for governing routing and transport and for managing switches components and the network as a whole along with higher level application protocols Offers thoughtful guidance on choosing between protocols selecting features within a protocol and other service and performance related decisions
