Bilby,2001-02-16 As the vast expanses of natural forests and the great populations of salmonids are harvested to support a rapidly expanding human population the need to understand streams as ecological systems and to manage them effectively becomes increasingly urgent The unfortunate legacy of such natural resource exploitation is well documented For several decades the Pacific coastal ecoregion of North America has served as a natural laboratory for scientific and managerial advancements in stream ecology and much has been learned about how to better integrate ecological processes and characteristics with a human dominated environment These in sightful but hard learned ecological and social lessons are the subject of this book Integrating land and rivers as interactive components of ecosystems and watersheds has provided the ecological sciences with important theoretical foundations Even though scientific disciplines have begun to integrate land based processes with streams and rivers the institutions and processes charged with managing these systems have not done so successfully As a result many of the watersheds of the Pacific coastal ecoregion no longer support natural settings for environmental processes or the valuable natural resources those processes create An important role for scientists educators and decision makers is to make the integration between ecology and consumptive uses more widely understood as well as useful for effective management [Changes And Disturbance In Tropical Rain Forest In South East Asia](#) Tim H Clutton-brock,David M Newbery,G T Prance,2000-09-27 Views on the dynamics of tropical forests are changing rapidly with the recognition that their environment is variable on the decadal to century scale Fluctuating climatic conditions partly determine tropical forest structure species composition and dynamics Tropical communities are also highly contingent in space and time with respect to site and historical factors Tropical forests have experienced to some degree this disturbance regime in the past but climatologists are now predicting increasingly frequent extreme events in the new century The combination of increasing deforestation and land use conversion by man plus an increasingly variable environment

means a situation that could be very difficult to manage
