Robbins Botany 3rd Ed:

Economic Botany S. L. Kochhar, 2016-07-01 This book offers an up to date account of important crops grown worldwide. It provides detailed discussion on the history of plant exploration, migration, domestication and distribution and crop improvement. The text starts with the origin and diversification of cultivated plants followed by discussion on tropical, subtropical and temperate crops that are sources of food, beverages, spices and medicines as well as plant insecticides, timber plants and essential oil yielding plants. The genetic and evolutionary aspects of different plants and their health benefits are highlighted. The book covers topics dealing with biodiversity, conservation, petro crops, ethnobotanical studies and important sub-tropical and temperate plants that have commercial importance. The significance of major plant species under each category is described in detail. Illustrated with numerous well-labelled line diagrams and pictures, this book will be useful for students of botany, food and nutrition, forestry, agriculture, horticulture, plant breeding and environmental science. *World*

Food Problem Professor Miloslav Rechcigl, 2018-01-10 The aim of this publication is to provide the interested reader with an authoritative and comprehensive up to date bibliography on all important facets of the world food problem encompassing such questions as the availability of natural resources, the present and future sources of energy, environmental quality, population growth, world malnutrition, the state of food production, food consumption patterns, future food needs, toxicological aspects of food, agricultural and industrial aspects of food production and family planning. It is the first compilation of its kind in that it covers the subject from a multidisciplinary point of view including publications that deal with the description and analysis of the world food problem as well as those that offer alternative strategies and specific technological measures for alleviating the problem. **Exploring Biology in the Laboratory: Core Concepts** Murray P. Pendarvis, John L.

Crawley, 2019-02-01 *Exploring Biology in the Laboratory: Core Concepts* is a comprehensive manual appropriate for introductory biology lab courses. This edition is designed for courses populated by nonmajors or for majors courses where abbreviated coverage is desired. Based on the two semester version of *Exploring Biology in the Laboratory 3e*, this Core Concepts edition features a streamlined set of clearly written activities with abbreviated coverage of the biodiversity of life. These exercises emphasize the unity of all living things and the evolutionary forces that have resulted in and continue to act on the diversity that we see around us today. **The English New England Voyages, 1602-1608** David B.

Quinn, 2017-05-15 The publication of the narrative accounts of the voyages of Gisnold 1602 and Waymouth 1605 opened up for English readers what was then known as Norumbega, the later New England. They are the first documents of exploration of that region to have been published since that of Verrazzano's voyage 1524 in 1556. To the accounts of these voyages by John Brereton and James Rosier there was added by Purchas in 1625 the material of Martin Pring's voyage of 1603 and some scraps of information on the attempted colony by the Virginia Company of Plymouth at Sagadahoc on the Kennebec River in 1607-1608. The narrative of the voyage of the Mary and John discovered in the 19th century and now attributed to Robert

Davies remains our main authority for the 1607 voyage. Many ancillary documents are added to these essential sources. Most of these narratives have been edited in the distant past but they are now furnished with full information on fauna, flora, and above all ethnography. The material which has become available on Indians of both northern and southern New England has enabled a full account to be given of them while expert advice has been obtained in the edition of the Eastern Abenaki vocabulary of 1605. Considerable attention has been paid to topographical problems to which new solutions are offered in a number of cases though conflicting views are discussed in an appendix. The volume thus makes up a collection which is basic for the understanding of how Englishmen began to explore New England and how its inhabitants learnt something of the English and on how that important territory first came to light in detail. The narratives are of great interest in themselves and the biographical information which it has been possible to assemble in the introduction about a number of the authors and actors in the voyages and the colonising attempt of 1607 is valuable in enabling the reader to understand what they wrote and what they omitted. Professor and Mrs Quinn have worked on this volume for a number of years and their introduction and notes constitute an important addition to our knowledge.

This book chronicles the earliest histories of familiar tropical Asian crops in the ancient Middle East and the Mediterranean from rice and cotton to citrus and cucumbers. Drawing on archaeological materials and textual sources in over seven ancient languages, *The Tropical Turn* unravels the breathtaking anthropogenic peregrinations of these familiar crops from their homelands in tropical and subtropical Asia to the Middle East and the Mediterranean, showing the significant impact South Asia had on the ecologies, dietary habits, and cultural identities of peoples across the ancient world. In the process, Sureshkumar Muthukumaran offers a fresh narrative history of human connectivity across Afro-Eurasia from the Bronze Age to the late centuries BCE.
