Sakata, Sarah C. Woolley, Richard R. Fay, Arthur N. Popper, 2020-03-19 Vocal signals are central for social communication across a wide range of vertebrate species consequently it is critical to understand the mechanisms underlying the learning control and evolution of vocal communication Songbirds are at the forefront of research into such neural mechanisms Indeed songbirds provide a particularly important model system for this endeavor because of the many parallels between birdsong and human speech Specifically 1 songbirds are one of the few vertebrate species that like humans learn their vocal signals during development 2 the processes of song learning and control in songbirds shares many parallels with the process of speech acquisition in humans and 3 there exist deep homologies between the circuits for the learning control and processing of vocal signals across songbirds and humans In addition because of the diversity of songbirds and song learning strategies songbirds offer a powerful model system to use the comparative method to reveal mechanisms underlying the evolution of song learning and production Taken together research on songbirds can not only reveal general principles underlying vertebrate vocal communication but can also provide insight into potential mechanisms underlying the learning control and processing of speech This volume will cover a range of topics in birdsong spanning multiple level of analysis Chapters will be authored by the world s leading experts on birdsong and will provide comprehensive reviews of the processes underlying song learning of the neural circuits for song learning and control as well as for the extraction and processing of song information of the selection pressures underlying song evolution and of genetic and molecular mechanisms underlying the learning and evolution of song The primary goals of this volume are to provide comprehensive integrative and comparative perspectives on birdsong and to underscore the importance of birdsong to biomedical research evolutionary biology and behavioral systems and computational neuroscience The target audience of this volume will be graduate students postdoctoral fellows and established academics and neuroscientists who are interested in mechanisms of communication from an integrative and comparative perspective The volume is intended to function as a high profile and contemporary reference on current work related to the learning control processing and evolution of birdsong This volume will have broad appeal to comparative and sensory biologists neurophysiologists and behavioral systems and cognitive neuroscientists who attend meetings such as the Society for Neuroscience the International Society for Neuroethology and the Society for Integrative and Comparative Biology Because of the relevance of birdsong research to understanding human speech it is likely that the volume will also be of interest to speech researchers and clinicians researching communication motor and sensory processing disorders **Advances in Cultural Linguistics** Farzad Sharifian, 2017-05-02 This groundbreaking collection represents the broad scope of cutting edge research in Cultural Linguistics a burgeoning field of

The Ascent of Birds John Reilly, 2018-04-16 When and where did the ancestors of modern birds evolve What enabled them to survive the meteoric impact that wiped out the dinosaurs How did

these early birds spread across the globe and give rise to the 10 600 plus species we recognise today from the largest ratites to the smallest hummingbirds Based on the latest scientific discoveries and enriched by personal observations *The Ascent of Birds* sets out to answer these fundamental questions *The Ascent of Birds* is divided into self contained chapters or stories that collectively encompass the evolution of modern birds from their origins in Gondwana over 100 million years ago to the present day The stories are arranged in chronological order from tinamous to tanagers and describe the many dispersal and speciation events that underpin the world's 10 600 plus species Although each chapter is spearheaded by a named bird and focuses on a specific evolutionary mechanism the narrative will often explore the relevance of such events and processes to evolution in general The book starts with *The Tinamou's Story* which explains the presence of flightless birds in South America Africa and Australasia and dispels the cherished role of continental drift as an explanation for their biogeography It also introduces the concept of neoteny an evolutionary trick that enabled dinosaurs to become birds and humans to conquer the planet *The Vegavis's Story* explores the evidence for a Cretaceous origin of modern birds and why they were able to survive the asteroid collision that saw the demise not only of dinosaurs but of up to three quarters of all species *The Duck's Story* switches to sex why have so few species retained the ancestral copulatory organ Or put another way why do most birds exhibit the paradoxical phenomenon of penis loss despite all species requiring internal fertilisation *The Hoatzin's Story* reveals unexpected oceanic rafting from Africa to South America a stranger than fiction means of dispersal that is now thought to account for the presence of other South American vertebrates including geckos and monkeys The latest theories underpinning speciation are also explored *The Manakin's Story* for example reveals how South America's extraordinarily rich avifauna has been shaped by past geological oceanographic and climatic changes while *The Storm Petrel's Story* examines how species can evolve from an ancestral population despite inhabiting the same geographical area The thorny issue of what constitutes a species is discussed in *The Albatross's Story* while *The Penguin's Story* explores the effects of environment on phenotype in the case of the Emperor penguin the harshest on the planet Recent genomic advances have given scientists novel approaches to explore the distant past and have revealed many unexpected journeys including the unique overland dispersal of an early suboscine from Asia to South America *The Sapayoa's Story* and the blackbird's ancestral sweepstake dispersals across the Atlantic *The Thrush's Story* Additional vignettes update more familiar concepts that encourage speciation sexual selection *The Bird of Paradise's Story* extended phenotypes *The Bowerbird's Story* hybridisation *The Sparrow's Story* and great speciators *The White eye's Story* Finally the book explores the raft of recent publications that help explain the evolution of cognitive skills *The Crow's Story* plumage colouration *The Starling's Story* and birdsong *The Finch's Story*
