Consumer Psychology in Behavioural Perspective G. R. Foxall, 1990 The purpose of the thesis is to assess the contribution of the experimental analysis of behaviour EAB which is closely associated with the work of B F Skinner to the development of consumer psychology an applied subdiscipline which is currently dominated by cognitive models of choice Chapter 1 argues that the predominance of the cognitive model impedes the scientific progress of the psychology of consumer behaviour by inhibiting the development of alternative models A proliferation of competing explanations is advocated for the clash of explanations which Feysabend argues is a prerequisite of such progress The EAB is advanced as a vehicle for the erosion of the dominating paradigm it not only draws attention to the neglected environmental determinants of behaviour but also provides a philosophical standpoint from which to conduct a critique of the prevailing cognitivism The EAB is described in detail in Chapter 2 its philosophical foundation is examined in terms of the radical epiphenomenalism upon which its mode of explanation rests and an account of operant conditioning demonstrates the empirical basis of the paradigm Skinner's ontological redefinition of behavioural science is outlined through a comparison of classical and operant conditioning The critical significance of the EAB for consumer psychology is explained in Chapter 3 Attention is drawn to the EAB's emphasis on the critical evaluation of theoretical terms unobservables alternative sources of explanation derived from a behaviourist perspective on choice are presented and the more direct route to knowledge provided by a theoretically based experimental method is discussed The EAB is itself subjected to criticism in Chapter 4 which examines its limited capacity to explain human behaviour in complex social situations The verbal control of behaviour the dualistic function of reinforcement informational and hedonic and the disparity between the closed setting of the operant chamber and the relatively open settings in which purchase and

consumption occur are noted as undermining radical behaviourism's claim to embody a comprehensive explanation of behaviour Chapter 5 is concerned with the development and evaluation of a model of consumer behaviour derived from the EAB as reconstructed after the critical examination pursued in Chapter 4 The Behavioural Perspective Model seeks to explain patterns of purchase and consumption by the relative openness of the settings in which they take place and the patterns of reinforcement which apparently control them The model's contribution to consumer psychology is discussed in terms of the relevance of its variables to the outcomes of published behaviour modification experiments concerned with environmental conservation Chapter 6 summarises the argument and its implications

An Advanced Guide to Psychological Thinking Robert Ausch, 2015-05-06 Psychology is a diverse assortment of fields with distinct referents often using the same terms and it is not always easy to identify its shared assumptions At base the academic variants tend to include the notion that mental activity takes place in hard to access inner spaces making it more appropriate to study behavioral manifestations of it yet all of it can be represented in an expert language with a confusing relationship to physiological mechanisms

An Advanced Guide to Psychological Thinking Critical and Historical Perspectives focuses on several key areas in psychology learning the brain child development and psychotherapy and identifies several conceptual tensions that ground psychological understanding of various phenomena These include a tension between inside and outside structure and function higher and lower and description and explanation all have historically generated confusion at the heart of the discipline As psychology was transformed into the study of consciousness in the late nineteenth century and the science of behavior in the early twentieth the disciplines of psychology struggled to distinguish between what was properly inside and what was outside mind person and organism as well as what forms the study of these insides would take Additionally it was unclear how to reconceive the traditional structures of the post Cartesian mind in the terms of evolutionary functionalism without losing sight of the fact that the mind has its own organization or the historical connection between mind and higher forms of being Psychology's influence today particularly that of post Freudian therapeutics has extended far beyond the university creating a therapeutic sensibility by which

Bara, 2016-07-07 Originally published in 1995 this book is about the conduct of cognitive science rather than what cognitive science is It has three main objectives First it describes the birth of cognitive science Second it outlines the method of enquiry which characterises and defines cognitive science This method uses the techniques of artificial intelligence based on the assumption that mental activity can in principle be reproduced by a computer program Third the book describes the state of the art in relevant areas with particular attention to application fields such as pedagogics human machine interaction and psychotherapy The developmental approach is emphasised and highlights the fact that developmental aspects are essential in order to comprehend the steady mode of functioning achieved once a person has reached total maturity Cognitive science is not presented as a definitive method for the analysis of the

mind though the author's conclusion is that it is the best of all possible methods today At the time of publication this book would have been useful as an advanced textbook for students on courses specialising in cognitive science and as a source of further information for those working in related areas such as cognitive psychology linguistics and computer science It will still be of interest to experts and students in the field of cognitive science

The Conceptual Representation of Consciousness Thomas Natsoulas, 2015-09-11 Consciousness is familiar to us first hand yet difficult to understand This book concerns six basic concepts of consciousness exercised in ordinary English The first is the interpersonal meaning and requires at least two people involved in relation to one another The second is a personal meaning having to do with one's own perspective on the kind of person one is and the life one is leading The third meaning has reference simply to one being occurrently aware of something or as though of something The fourth narrows the preceding sense to one having direct occurrent awareness of happenings in one's own experiential stream The fifth is the unitive meaning of consciousness and has reference to those portions of one's stream that one self appropriates to make up one's conscious being The last is the general state meaning and picks out the general operating mode in which we most often function

Social Understanding Jürgen Klüver, Christina Klüver, 2010-12-17 The operation of understanding is the fundamental methodical procedure of hermeneutics and is usually seen as contradiction to scientific explanation by the usage of mathematical models Yet understanding is the basic way in which humans organize their everyday practice namely by understanding other people and social situations In this book the authors demonstrate how an integration of hermeneutical understanding and scientific explanation can be done via the construction of suited geometrical models with neural networks of processes of understanding In this sense the authors develop some kind of mathematical hermeneutics Connecting links for the integration of the two methodical poles are the developments of particular models of Artificial Intelligence AI which are able to perform certain tasks of understanding
