Minds Of Their Own Thinking And Awareness In Animals:

Minds of Their Own Lesley J. Rogers, 1997 Examines animal behaviour and also the structure and functioning of their brains to give an understanding of how animals think

Minds Of Their Own Lesley J Rogers, 2018 Do Animals have ideas Do they experience pain like humans Do they think about objects that they cannot see About situations that have occurred in the past Do they consciously make plans for the future or do they simply react unthinkingly to objects as they appear and situations as they arise All of these questions have bearing on whether or not animals have consciousness The advent of computers that think has lead us to consider intelligence in a way we never thought possible a decade ago But when and how does information processing in the brain become automatic In *Minds of Their Own* Lesley J Rogers examines the issue of animal thought both sympathetically and critically by looking at the different behavior characteristics of a variety of animals the evolution of the brain and when consciousness might have evolved To most people to be conscious means to be aware of oneself as well as to be aware of others But does this hold true for animals The answer may have implications which transcend mere scientific inquiry if animals are cognizant creatures what if any moral responsibility do humans have to assure their rights This timely book examines this issue and others by emphasizing comparisons between humans and animals how we evolved how we remember how we learn Provided by publisher
