Real Algebraic Geometry And Ordered Structures:

Real Algebraic Geometry and Ordered Structures Charles N. Delzell, James J. Madden, 2000 This volume contains 16 carefully refereed articles by participants in the Special Semester and the AMS Special Session on Real Algebraic Geometry and Ordered Structures held at Louisiana State University and Southern University Baton Rouge The 23 contributors to this volume were among the 75 mathematicians from 15 countries who participated in the special semester Topics include the topology of real algebraic curves Hilbert's 16th problem moduli of real algebraic curves effective sums of squares of real forms Hilbert's 17th problem efficient real quantifier elimination subanalytic sets and stratifications semialgebraic singularity theory radial vector fields exponential functions and valuations on nonarchimedean ordered fields valued field extensions partially ordered and lattice ordered rings rings of continuous functions spectra of rings and abstract spaces of higher level orderings and real places This volume provides a good overview of the state of the art in this area in the 1990s It includes both expository and original research papers by top workers in this thriving field The authors and editors strived to make the volume useful to a wide audience including students and researchers interested in real algebraic geometry and ordered structures two subjects that are obviously related but seldom brought together

Real Algebraic Geometry and Ordered Structures James J. Madden, 1899 Recent Advances in Real Algebraic Geometry and Quadratic Forms Bill Jacob, Tsit-Yuen Lam, Robert O. Robson, 1994 The papers collected here present an up to date record of the current research developments in the fields of real algebraic geometry and quadratic forms Articles range from the technical to the expository and there are also indications to new research directions

Polynomial Optimization, Moments, and Applications Michal Kočvara, Bernard Mourrain, Cordian Riener, 2023-12-27 Polynomial optimization is a fascinating field of study that has revolutionized the way we approach nonlinear problems described by polynomial constraints The applications of this field range from production planning processes to transportation energy consumption and resource control This introductory book explores the latest research developments in polynomial optimization presenting the results of cutting edge interdisciplinary work conducted by the European network POEMA For the past four years experts from various fields including algebraists geometers computer scientists and industrial actors have collaborated in this network to create new methods that go beyond traditional paradigms of mathematical optimization By exploiting new advances in algebra and convex geometry these innovative approaches have resulted in significant scientific and technological advancements This book aims to make these exciting developments accessible to a wider audience by gathering high quality chapters on these hot topics Aimed at both aspiring and established researchers as well as industry professionals this book will be an invaluable resource for anyone interested in polynomial optimization and its potential for real world applications

Fast Algorithms for Structured Matrices Vadim Olshevsky, 2003 One of the best known fast computational algorithms is the fast Fourier transform method Its efficiency is based mainly on the special structure of the discrete Fourier transform matrix Recently many other

algorithms of this type were discovered and the theory of structured matrices emerged This volume contains 22 survey and research papers devoted to a variety of theoretical and practical aspects of the design of fast algorithms for structured matrices and related issues Included are several papers containing various affirmative and negative results in this direction The theory of rational interpolation is one of the excellent sources providing intuition and methods to design fast algorithms The volume contains several computational and theoretical papers on the topic There are several papers on new applications of structured matrices e g to the design of fast decoding algorithms computing state space realizations relations to Lie algebras unconstrained optimization solving matrix equations etc The book is suitable for mathematicians engineers and numerical analysts who design study and use fast computational algorithms based on the theory of structured matrices
