Roman Public Buildings:

Roman Public Buildings I. M. Barton, 1995 Roman Public Buildings was first published in the Exeter Studies in History series in 1989 It examines the development of Roman architecture and the significance of different types of buildings for the political social and economic history of the period A glossary of technical terms is included **The Architecture of the Roman Empire** William Lloyd MacDonald, 1982-01-01 Examines Roman architecture as a part of overall urban design and looks at arches public buildings tombs columns stairs plazas and streets *Monumentality and the Roman Empire* Edmund Thomas, 2007-11-16 The quality of monumentality is attributed to the buildings of few historical epochs or cultures more frequently or consistently than to those of the Roman Empire It is this quality that has helped to make them enduring models for builders of later periods This extensively illustrated book the first full length study of the concept of monumentality in Classical Antiquity asks what it is that the notion encompasses and how significant it was for the Romans themselves in moulding their individual or collective aspirations and identities Although no single word existed in antiquity for the qualities that modern authors regard as making up that term its Latin derivation from monumentum a monument attests plainly to the presence of the concept in the mentalities of ancient Romans and the development of that notion through the Roman era laid the foundation for the classical ideal of monumentality which reached a height in early modern Europe This book is also the first full length study of architecture in the Antonine Age when it is generally agreed the Roman Empire was at its height By exploring the public architecture of Roman Italy and both Western and Eastern provinces of the Roman Empire from the point of view of the benefactors who funded such buildings the architects who designed them and the public who used and experienced them Edmund Thomas analyses the reasons why Roman builders sought to construct monumental buildings and uncovers the close link between architectural monumentality and the identity and ideology of the Roman Empire itself

(Re)using Ruins: Public Building in the Cities of the Late Antique West, A.D. 300-600 Douglas R. Underwood, 2019-04-09 In *Re using Ruins* Douglas Underwood presents a new account of the use and reuse of Roman urban public monuments in a crucial period of transition A D 300 600 Commonly seen as a period of uniform decline for public building especially in the western half of the Mediterranean *Re using Ruins* shows a vibrant yet variable history for these structures Douglas Underwood establishes a broad catalogue of archaeological evidence supplemented with epigraphic and literary testimony for the construction maintenance abandonment and reuses of baths aqueducts theatres amphitheatres and circuses in Italy southern Gaul Spain and North Africa demonstrating that the driving force behind the changes to public buildings was largely a combined shift in urban ideologies and euergetistic practices in Late Antique cities The Oxford Handbook of Greek Cities in the Roman Empire , 2024-11-13 This handbook provides the first comprehensive treatment of the Greek cities in the Roman Empire The poleis are studied here both as urban forms with a specific organization of space and specific public buildings and as socio political entities with specific institutions and social hierarchies The contributions cover all the

important aspects of civic life and present the on going debates on the degree of integration and autonomy uniformization and diversity of the Greek civic model in the Roman Empire One of the main guidelines of the handbook is the issue of the impact of Roman rule on the long lasting Greek model of political social and spatial organization Geographically the volume covers the whole Roman Empire with a focus on regions where the Greek polis was the dominant form of organization such as mainland Greece the Aegean Islands Asia Minor Syria and the Black Sea region In addition to that the Greek cities of Sicily and Egypt as well as more isolated Greek settlements such as Cyrene in North Africa are also considered The chronological scope of the handbook runs from a community s integration into the Roman Empire varying depending on the region until the 3rd c AD when the epigraphic documentation strongly decreases and some important changes make way for the transition to Late Antiquity

Roman Architecture Rogan Fish, Roman architecture emerged as a distinctive style that blended elements from earlier civilizations primarily Greek and Etruscan influences As Rome expanded from a small settlement into a powerful empire its architectural identity evolved incorporating new techniques and materials that allowed for grander and more functional structures The early foundations of Roman architecture set the stage for innovations that would shape the empire s urban landscape for centuries One of the most significant influences on Roman architecture came from the Etruscans a civilization that dominated central Italy before Rome s rise The Etruscans were skilled builders who introduced techniques such as the use of the arch and vault both of which would later become hallmarks of Roman engineering Etruscan temples with their high podiums and deep porches also served as models for early Roman religious structures Another major influence was Greek architecture which Romans admired and adapted to suit their needs The Greeks provided inspiration in the use of columns decorative friezes and symmetrical design elements that were later integrated into Roman temples public buildings and monuments Roman architectural development was also shaped by advancements in building materials and construction techniques The early Romans initially built using wood and mudbrick but as they refined their skills they transitioned to more durable materials like stone and concrete The introduction of concrete was a groundbreaking innovation allowing for stronger and more flexible structures Unlike the Greeks who relied heavily on marble the Romans preferred concrete for its affordability and adaptability enabling them to construct larger and more complex buildings such as amphitheaters aqueducts and domes
