## Science In History:

Science in History J. D. Bernal, 2012-10-04 J D Bernal's monumental work *Science in History* was the first full attempt to analyse the reciprocal relations of science and society throughout history from the perfection of the flint hand axe to the hydrogen bomb. In this remarkable study he illustrates the impetus given to and the limitations placed upon discovery and invention by pastoral, agricultural, feudal, capitalist and socialist systems and conversely the ways in which science has altered economic, social and political beliefs and practices. In this first volume Bernal discusses the nature and method of science before describing its emergence in the Stone Age, its full formation by the Greeks and its continuing growth, probably influenced from China under Christendom and Islam in the Middle Ages. Andrew Brown, Bernal's biographer with a nice sense of paradox, has said of him: 'he was steeped in history in part because he was always thinking about the future.' He goes on to say: '*Science in History* is an encyclopaedic yet individual and colourful account of the emergence of science from pre-historic times. There is detailed coverage of the scientific revolution of the Enlightenment, the Industrial Age and the first two thirds of the twentieth century. The writing flows and is devoid of the tortured idioms that mar so many academic histories of science. After reading it, it is easy to agree with C P Snow's orotund observation that Bernal was the last man to know science.' Faber Finds are reissuing the illustrated four-volume edition first published by Penguin in 1969. The four volumes are: Volume 1 *The Emergence of Science*; Volume 2 *The Scientific and Industrial Revolutions*; Volume 3 *The Natural Sciences in Our Time*; Volume 4 *The Social Sciences Conclusion*. This stupendous work is a magnificent synoptic view of the rise of science and its impact on society which leaves the reader awe-struck by Professor Bernal's encyclopaedic knowledge and historical sweep.

Times Literary Supplement      **Science in History**, 1971      **Science in History**, 1957      **An Introduction to the History of Science** Walter Libby, 1917      **Science in History** John Desmond Bernal, 1971      **Introduction to the History of Science** George Sarton, 1927      *Knowledge and Power* William Burns, 2018-07-06

*Knowledge and Power* presents and explores science not as something specifically for scientists but as an integral part of human civilization and traces the development of science through different historical settings from the Middle Ages through to the Cold War. Five case studies are examined within this book: the creation of modern science by Muslims, Christians and Jews in the medieval Mediterranean; the global science of the Jesuit order in the early modern world; the relationship between modernization and westernization in Russia and Japan from the late seventeenth to the mid nineteenth century; the role of science in the European colonization of Africa; and the rivalry in big science between the United States and the Soviet Union during the Cold War. Each chapter includes original documents to further the reader's understanding and this second edition has been enhanced with a selection of new images and a new chapter on Big Science and the Superpowers during the Cold War. Since the Middle Ages, people have been working in many civilizations and cultures to advance knowledge of and power over the natural world. Through a combination of narrative and primary sources, *Knowledge and Power* provides students with an

understanding of how different cultures throughout time and across the globe approached science It is ideal for students of world history and the history of science

**Science** Patricia Fara, 2009 Science A Four Thousand Year History rewrites science's past Instead of focussing on difficult experiments and abstract theories Patricia Fara shows how science has always belonged to the practical world of war politics and business Rather than glorifying scientists as idealized heroes she tells true stories about real people men and some women who needed to earn their living who made mistakes and who trampled down their rivals in their quest for success Fara sweeps through the centuries from ancient Babylon right up to the latest hi tech experiments in genetics and particle physics illuminating the financial interests imperial ambitions and publishing enterprises that have made science the powerful global phenomenon that it is today She also ranges internationally illustrating the importance of scientific projects based around the world from China to the Islamic empire as well as the more familiar tale of science in Europe from Copernicus to Charles Darwin and beyond Above all this four thousand year history challenges scientific supremacy arguing controversially that science is successful not because it is always right but because people have said that it is right
