Science: A History John Gribbin, 2009-08-27 In this book John Gribbin tells the story of the people who made science and the turbulent times they lived in As well as famous figures such as Copernicus Darwin and Einstein there are also the obscure the eccentric even the mad This diverse cast includes among others Andreas Vesalius landmark 16th century anatomist and secret grave robber the flamboyant Galileo accused of heresy for his ideas the obsessive competitive Newton who wrote his rivals out of the history books Gregor Mendel the Moravian monk who founded modern genetics and Louis Agassiz so determined to prove the existence of ice ages that he marched his colleagues up a mountain to show them the evidence *Science*, 2002 *Science* John Gribbin, 2003 An accessible narrative history focusing on the way in which science has progressed by building on what went before and also on the very close relationship between the progress of science and improved technology **Science: a History, 1543-2001** John Gribbin, 2002 This title begins with Galileo and takes the reader through to the scientific developments of string theory It is an accessible narrative history focusing on the way in which science has progressed by building on what went before and also on the very close relationship between the progress of science and improved technology **History of Western Science** John R. Gribbin, 2006 [The Emergence of a Scientific Culture](#) Stephen Gaukroger, 2008-10-23 Why did science emerge in the West and how did scientific values come to be regarded as the yardstick for all other forms of knowledge Stephen Gaukroger shows just how bitterly the cognitive and cultural standing of science was contested in its early development Rejecting the traditional picture of secularization he argues that science in the seventeenth century emerged not in opposition to religion but rather was in many respects driven by it Moreover science did not present a unified picture of nature but was an unstable field of different often locally successful but just as often incompatible programmes To complicate matters much depended on attempts to reshape the persona of the natural philosopher and distinctive new notions of objectivity and impartiality were imported into natural philosophy changing its character radically by redefining the qualities of its practitioners The West's sense of itself its relation to its past and its sense of its future have been profoundly altered since the seventeenth century as cognitive values generally have gradually come to be shaped around scientific ones Science has not merely brought a new set of such values to the task of understanding the world and our place in it but rather has completely transformed the task redefining the goals of enquiry This distinctive feature of the development of a scientific culture in the West marks it out from other scientifically productive cultures In *The Emergence of a Scientific Culture* Stephen Gaukroger offers a detailed and comprehensive account of the formative stages of this development and one which challenges the received wisdom that science was seen to be self evidently the correct path to knowledge and that the benefits of science were immediately obvious to the disinterested observer **How Science Works** James D. Williams, 2011-04-21 **Concise History of Science & Invention** Jolyon Goddard, 2010 A global view of science and technology as it developed over the centuries **History of Western Science**

Matsuura, 2012-10-05 Of all the founding fathers Thomas Jefferson had the most substantial direct experience with the issues surrounding intellectual property rights and their impact on creativity invention and innovation In our own digital age in which IP has again become the object of intense debate his voice remains one of the most vital in American history on this crucial subject Jefferson lived in a time of immense change when inventions and other creative works impacted the world profoundly In this atmosphere it became clear that the developers of creative works and the users of those works often have competing interests Jefferson appreciated as well as anyone that the originators of ideas needed legal protection He also

knew that innovation was crucial for a nation's economic prosperity as well as its political health and that rights should not become barriers Jefferson was in a unique position to understand the issues of intellectual property rights His pronouncements on these issues were those not of a scholar but rather of a practitioner As a scientist author and inventor he was a prolific creator He was also a tireless consumer of others works As America's first patent commissioner he decided which ideas merited protection and effectively created the patent review process Jeffrey Matsuura profiles Jefferson's diverse and substantial experience with these issues and discusses the lessons Jefferson's efforts offer us today as we grapple with many of the same challenges of balancing IP rights against an effort to foster creativity and innovation Without inserting Jefferson anachronistically into the current debate Matsuura does not shy away from positing where in the spectrum of opinion Jefferson's ideas lie For lawyers legal and technology historians and entrepreneurs Matsuura offers a fresh historically informed perspective on a current issue of major importance *A Sociology of Health* David
