Scheiber, James Kraska, Moon-Sang Kwon, 2015-08-25 Science Technology and New Challenges to Ocean Law offers fresh perspectives on a set of vital issues in the field of ocean law and policy Since the early period of the industrial revolution successive waves of revolutionary scientific discoveries and technological innovations have intensified the global population s exploitation of ocean and coastal resources In this volume several leading authorities in the field address major dimensions of the interface of science technology and ocean law both historically and in current day perspective and emergent challenges in legal ordering of ocean uses for sustainability and equitability Among the topics that are analysed in these readable accessible papers are ecosystem approaches to resource management the historic interplay of science and military concerns the place of science in dispute settlement processes the varied human uses of the seabed the roles in ocean governance of indigenous peoples legal issues in fisheries management and conservation and special regional problems of the Arctic the Bering Strait the South China Sea and the eastern Mediterranean The urgent importance of the subjects addressed here together with the variety of disciplinary approaches deployed by the authors enhance the value of this book s unique contribution to the literature of ocean studies Anthropological Perspectives on Technology Michael B. Schiffer, 2001 These fourteen original essays accept a dual premise technology pervades and is embedded in all human activities By taking that approach studies of technology address two questions central in anthropological and archaeological research today accounting for variability and

change These diverse yet interrelated chapters show that to understand human lives researchers must deal with the material world that all peoples create and inhabit Therefore an anthropology of technology is not a separate discrete inquiry instead it is a way to connect how people make and use things to any activity studied ranging from religion to enculturation to communication to art Each contributor discusses theories and methods and also offers a substantial case study These detailed inquiries span human societies from the Paleolithic to the computer age By moving beyond the usual approach of examining ancient technologies particularly chipped stone and low fired ceramics this volume probes for the construction of meaning in the material world across millennia The authors of these essays find technology to be an inclusive and flexible topic that merges with studies of everything else in human activity A provocative and powerful discussion of the role of technology in human cultures At a time when archaeology has become less focused on theory and archaeology and social anthropology seem to fracture farther and farther apart the book is a breath of fresh air Professor John Douglas University of Montana

Techno-Fixers Sean F. Johnston, 2020-03-26 This is the story of a seductive idea Over the past century the potential of new technology to solve social dilemmas has captivated modern culture From apps that encourage physical activity to airport scanners meant to prevent terrorism the concept that clever innovation can improve society is irresistible but faith in such technological fixes is seldom questioned Where did this idea come from what makes it so appealing and how does it endanger our future Techno Fixers traces the source of modern confidence in technology to engineering hubris radical utopian movements science fiction fanzines policy makers soundbites corporate marketing and optimistic consumer culture from the turn of the twentieth century until today Sean Johnston demonstrates that through the promotion of prominent government scientists technocrats entrepreneurs and popular media modern invention became the favourite tool for addressing human problems and society's ills Nonetheless when it comes to assessing the success of cigarette filters as the solution to safe smoking or DDT as the answer for agricultural productivity the evidence is sobering Cautioning that the rhetoric of technological fixes seldom matches reality Johnston examines how employing innovation to bypass traditional methods can foster as many problems as it solves A critical examination of modern faith in technology Techno Fixers evaluates past mistakes present implications and future opportunities for innovating societies
