Piccinini, 2006-11-14 Since the subject of Groups of Self Equivalences was first discussed in 1958 in a paper of Barcuss and Barratt a good deal of progress has been achieved This is reviewed in this volume first by a long survey article and a presentation of 17 open problems together with a bibliography of the subject and by a further 14 original research articles

Twistor Theory for Riemannian Symmetric Spaces Francis E. Burstall, John H. Rawnsley, 2006-11-14 In this monograph on twistor theory and its applications to harmonic map theory a central theme is the interplay between the complex homogeneous geometry of flag manifolds and the real homogeneous geometry of symmetric spaces In particular flag manifolds are shown to arise as twistor spaces of Riemannian symmetric spaces Applications of this theory include a complete classification of stable harmonic 2 spheres in Riemannian symmetric spaces and a Bäcklund transform for harmonic 2 spheres in Lie groups which in many cases provides a factorisation theorem for such spheres as well as gap phenomena The main methods used are those of homogeneous geometry and Lie theory together with some algebraic geometry of Riemann surfaces The work addresses differential geometers especially those with interests in minimal surfaces and homogeneous manifolds

K-theory and Homological Algebra Hvedri Inassaridze, 2006-11-14 Lie Algebras and Lie Groups Jean-Pierre Serre, 2009-02-07 This book reproduces J P Serre's 1964 Harvard lectures The aim is to introduce the reader to the Lie dictionary Lie algebras and Lie groups Special features of the presentation are its emphasis on formal groups in the Lie group part and the use of analytic manifolds on p-adic fields Some knowledge of algebra and calculus is required of the reader but the text is easily accessible to graduate students and to mathematicians at large

Invariance Theory Peter B. Gilkey, 1994-12-22 This book treats the Atiyah-Singer index theorem using the heat equation which gives a local formula for the index of any elliptic complex Heat equation methods are also used to discuss Lefschetz fixed point formulas the Gauss-Bonnet theorem for a manifold with smooth boundary and the geometrical theorem for a manifold with smooth boundary The author uses invariance theory to identify the integrand of the index theorem for classical elliptic complexes with the invariants of the heat equation

Non-Archimedean L-Functions Alexei A. Panchishkin, 2013-11-11 1 p n 1 The set of arguments s for which s is defined can be extended to all $s \in \mathbb{C}$ $s \neq 1$ and we may regard \mathbb{C} as the group of all continuous quasicharacters $\mathbb{C} \rightarrow \text{Hom}(\mathbb{R}, \mathbb{C})$

Coding Theory and Algebraic Geometry Henning Stichtenoth, Michael A. Tsfasman, 2006-11-15 About ten years ago V D Goppa found a surprising connection between the theory of algebraic curves over a finite field and error correcting codes The aim of the meeting Algebraic Geometry and Coding Theory was to give a survey on the present state of research in this field and related topics The proceedings contain

research papers on several aspects of the theory among them Codes constructed from special curves and from higher dimensional varieties Decoding of algebraic geometric codes Trace codes Exponential sums Fast multiplication in finite fields Asymptotic number of points on algebraic curves Sphere packings

Stochastic Finance Hans Föllmer, Alexander Schied, 2008-12-19 This book is an introduction to financial mathematics The first part of the book studies a simple one period model which serves as a building block for later developments Topics include the characterization of arbitrage free markets preferences on asset profiles an introduction to equilibrium analysis and monetary measures of risk In the second part the idea of dynamic hedging of contingent claims is developed in a multiperiod framework Such models are typically incomplete They involve intrinsic risks which cannot be hedged away completely Topics include martingale measures pricing formulas for derivatives American options superhedging and hedging strategies with minimal shortfall risk In addition to many corrections and improvements this second edition contains several new sections including a systematic discussion of law invariant risk measures and of the connections between American options superhedging and dynamic risk measures
