Jane Austen was a keen consumer of the arts throughout her lifetime. The *Edinburgh Companion to Jane Austen and the Arts* considers how Austen represents the arts in her writing from her juvenilia to her mature novels. The thirty three original chapters in this Companion cover the full range of Austen's engagement with the arts including the silhouette and the caricature, crafts, theatre, fashion, music and dance together with the artistic potential of both interior and exterior spaces. This volume also explores her artistic afterlives in creative re-imaginings across different media including adaptations and transpositions in film, television, theatre, digital platforms and games.

Jane Austen: Bicentenary Essays John Halperin, 1975-10-31. This book was first published in 1975 the bicentenary of Jane Austen's birth. Though she has long been recognized as one of the major English novelists, her reputation was established relatively late and has withstood periods of neglect and controversy. The present volume brings together nineteen essays that marked the bicentenary and in doing so reflected the critical attitudes which some of the twentieth century's most influential scholars have entertained towards the novelist. These essays range from nineteenth century reactions to the novels and to the novelist herself through twentieth century criticism of the individual novels to considerations of the novelist's reputation abroad. This book will be of interest both to scholars and students of eighteenth and nineteenth century fiction and also to the general reader of Jane Austen's novels.

Fluctuations and Sensitivity in Nonequilibrium Systems W. Horsthemke, D. K. Kondepudi, 2012-12-06. This volume contains the invited lectures and a selection of the contributed papers and posters of the workshop on *Fluctuations and Sensitivity in Nonequilibrium Systems* held at the Joe C. Thompson Conference Center, University of Texas at Austin, March 12-16, 1984. The workshop dealt with stochastic phenomena and sensitivity in nonequilibrium systems from a macroscopic point of view. During the last few years it has been realized that the role of fluctuations is far less trivial in systems far from equilibrium than in systems under thermodynamic equilibrium conditions. It was found that random fluctuations often are a determining factor for the state adopted by macroscopic systems and cannot be regarded as secondary effects of minor importance. Further, nonequilibrium systems are also very sensitive to small systematic changes in their environment. The main aims of the workshop were i) to provide scientists with an occasion to acquaint themselves with the state of the art in fluctuation theory and sensitivity analysis; ii) to provide a forum for the presentation of recent advances in theory and experiment; iii) to bring together theoreticians and experimentalists in order to delineate the major open problems and to formulate strategies to tackle these problems. The organizing committee of the workshop consisted of W. Horsthemke, O. K. Kondepudi, G. Dewel, G. Nicolis, I. Prigogine and L. Reichl.
