Sensory Systems and Communication in Arthropods Wiese, Gribakin, 2013-11-21 **Sensory Systems of Arthropods** Konrad Wiese, 1993 **The Ecology of Animal Senses** Gerhard von der Emde, Eric Warrant, 2015-12-16 The collection of chapters in this book present the concept of matched filters response characteristics matching the characteristics of crucially important sensory inputs which allows detection of vital sensory stimuli while sensory inputs not necessary for the survival of the animal tend to be filtered out or sacrificed The individual contributions discuss that the evolution of sensing systems resulted from the necessity to achieve the most efficient sensing of vital information at the lowest possible energetic cost Matched filters are found in all senses including vision hearing olfaction mechanoreception electroreception and infrared sensing and different cases will be referred to in detail **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), 1991 *Bioacoustics* , 1993 **Invertebrate Vision** Eric Warrant, Dan-Eric Nilsson, 2006-10-05 Publisher description **Insect Biodiversity** Robert G. Foottit, Peter H. Adler, 2017-10-02 Volume One of the thoroughly revised and updated guide to the study of biodiversity in insects The second edition of *Insect Biodiversity Science and Society* brings together in one comprehensive text contributions from leading scientific experts to assess the influence insects have on humankind and the earth's fragile ecosystems Revised and updated this new edition includes information on the number of substantial changes to entomology and the study of biodiversity It includes current research on insect groups classification regional diversity and a wide range of concepts and developing methodologies The authors examine why insect biodiversity matters and how the rapid evolution of insects is affecting us all This book explores the wide variety of insect species and their evolutionary relationships Case studies offer assessments on how insect biodiversity can help meet the needs of a rapidly expanding human population and also examine the consequences that an increased loss of insect species will have on the world This important text Explores the rapidly increasing influence on systematics of genomics and next generation sequencing Includes developments in the use of DNA barcoding in insect systematics and in the broader study of insect biodiversity including the detection of cryptic species Discusses the advances in information science that influence the increased capability to gather manipulate and analyze biodiversity information Comprises scholarly contributions from leading scientists in the field *Insect Biodiversity Science and Society* highlights the rapid growth of insect biodiversity research and includes an expanded treatment of the topic that addresses the major insect groups the zoogeographic regions of biodiversity and the scope of systematics approaches for handling biodiversity data **Biocommunication of Animals** Guenther Witzany, 2013-11-08 Every coordination within or between animals depends on communication processes Although the signaling molecules vocal and tactile signs gestures and its combinations differ throughout all species according their evolutionary origins and variety of adaptation processes certain levels of biocommunication can be found in all animal species a Abiotic environmental indices such as temperature light water etc that affect the local ecosphere of an organism

and are sensed interpreted b Trans specific communication with non related organisms c Species specific communication between same or related species d Intraorganismic communication i e sign mediated coordination within the body of the organism This book gives an overview of the manifold levels of animal communication exemplified by a variety of species and thereby broadens the understanding of these organisms *Current Catalog* National Library of Medicine (U.S.), First multi year cumulation covers six years 1965 70

Sensory Systems of Animals Mark Hollins, 2024-10-10 Perception in animals is a fascinating and challenging subject that calls to students from many disciplines The aim of this book is to provide a knowledge base and unifying perspective on the field that will enable beginning researchers to chart their own course within it The author describes in a systematic but engaging way the sensory systems of humans and other vertebrates as well as arthropods and molluscs Why is it important to understand the senses of animals One reason is that human activities are changing the perceptual world of animals in ways that expose them to danger From bright outdoor lighting disorienting migrating birds to human sonar driving whales to beach themselves it is becoming increasingly important to find ways to reduce such dangers This will require big changes in human behavior and greater understanding of how animals react physiologically and behaviorally to anthropogenic changes in their environment The emphasis throughout is on research in both the behavioral ethological and neuroscientific traditions that has led to important discoveries The functional anatomy of each system from receptor cells to brain areas is succinctly described explaining how it underlies the animal s sensory abilities and behavior Overall descriptions of a sense for a class of animals for example hearing in arachnids are interspersed with expanded coverage of that sense in a particular animal such as the ogre faced web casting spider that does a backflip to capture an insect buzzing overhead Evolutionary themes are found throughout the book for example in describing the development of the vertebrate ear and in the convergent evolution of the eyes of vertebrates and cephalopods With over 500 references and 80 illustrations this textbook is primary reading intended for advanced undergraduates and beginning graduate students of veterinary science lab animal science and zoology It would also be of great interest to professionals and academics working with animals such as veterinary professionals and zookeepers
