Sentence Processing Vol 31 A Crosslinguistic Perspective:

Cross-linguistic Variation in Sentence Processing Despoina Papadopoulou, 2006-08-27 The central question that I will pursue in this study concerns the universality of the human sentence processing mechanism. It will be explored whether there are cross linguistic differences in parsing by presenting psycholinguistic evidence from Greek. Empirical data collected from both native speakers and second language learners of Greek will be used to assess various parsing models and to investigate parsing mechanisms employed in Greek. The results from the L2 learners will be additionally used to shed light on the nature of sentence processing in a second language. Moreover, a supplementary objective of this study is to provide insights into the question of whether discourse biases guide initial parsing choices. The goal of any theory of sentence processing is to determine how people arrive at the desired interpretation of a given sentence attempting thus to investigate the very nature of the human language processor. Sentence processing is a rapid and automatic process, one which is closely linked in time to the input. Garrett 1990: 136; Pickering 1999. This means that sentence processing proceeds in an incremental fashion: once each word is encountered, it is integrated to the sentence analysis. Sentence processing necessarily involves a syntactic analysis of the sentence, usually referred to as parsing, which allows the reader or listener to identify the syntactic role of words within each sentence and an analysis which involves the use of semantic and pragmatic information to arrive at a plausible interpretation.

Sentence Processing: A Crosslinguistic Perspective Dieter Hillert, 1998-07-13 The innovative element of this volume is its overview of the fundamental psycholinguistic topics involved in sentence processing. While most psycholinguistic studies focus on a single language and induce a general model of universal sentence processing, this volume proposes a cross linguistic approach. It contains two distinct features first embraced in the 18th century by brothers Freiherr Wilhelm von Humboldt and Alexander von Humboldt. First, it offers a linguistic theory that characterizes universal cognitive features of the human language processor or the mind and its biological source independent of a single language structure. Second, it contains a language theory which considers the diversity of linguistic structures and provides a powerful theory of language processing. Contributors cover a wide range of topics including word recognition, fixed expressions, grammatical constraints, empty categories, and parsing. Their research involves analyses of 12 languages. This book provides an overview of central psycholinguistic topics in sentence processing and combines deductive and inductive methods in fashioning an innovative approach. The contributors address word recognition, fixed expressions, grammatical constraints, empty categories, and parsing. Its original papers form a coherent presentation.

Bilingual Sentence Processing Roberto Heredia, J. Altarriba, 2002-07-25 *Bilingual Sentence Processing* Eva M. Fernández, 2003 This title looks at the representation of semitic words in the mental lexicon of semitic language speakers. It asks: should we see semitic words morphology as root based or word based? Explicit and Implicit Prosody in Sentence Processing Lyn Frazier, Edward Gibson, 2015-06-23 Top researchers in prosody and psycholinguistics present their research

and their views on the role of prosody in processing speech and also its role in reading The volume characterizes the state of the art in an important area of psycholinguistics How are general constraints on prosody timing and intonation melody used to constrain the parsing and interpretation of spoken language How are they used to assign a default prosody intonation in silent reading and more generally what is the role of phonology in reading Prosody and intonation interact with phonology syntax semantics and pragmatics and thus are at the very core of language processes

Research in Second Language Processing and Parsing Bill VanPatten, Jill Jegerski, 2010-12-15 This volume is the first dedicated to the growing field of theory and research on second language processing and parsing The fourteen papers in this volume offer cutting edge research using a number of different languages e g Arabic Spanish Japanese French German English and structures e g relative clauses wh gaps gender number to examine various issues in second language processing first language influence whether or not non natives can achieve native like processing the roles of context and prosody the effects of working memory and others The researchers include both established scholars and newer voices all offering important insights into the factors that affect processing and parsing in a second language

Inside Psychology Patrick Rabbitt, 2009 Psychology is a young science It has made great strides over the past 100 or so years to become one of the most rapidly growing of the sciences This text brings together some of the most influential psychologists from the past 50 years to consider just how we got to where we are in psychology and where we might be heading

Experimental Studies in Word and Sentence Prosody Carlos Gussenhoven, Tomas Riad, 2009-02-26 This volume presents 14 experimental studies of lexical tone and intonation in a wide variety of languages Six papers deal with the discriminability or the function of intonation contours and lexical tones in specific languages as established on the basis of listener responses as well as with brain activation patterns resulting from the perception of tonal and intonational stimuli The remaining eight papers report on detailed phonetic findings on a variety of tonal phenomena in a number of languages including declination in tone languages final lowering consonant tone interactions and pitch target alignment

The Sentence in Language and Cognition Tista Bagchi, 2008-01-01 The Sentence in Language and Cognition is about the significant role of the sentence in linguistic cognition and in the practical domains of human existence Dr Tista Bagchi has written a comprehensive assessment of the structure and cognitive function of the sentence and the clause in the context of real world discourse and activities The notions of sentencehood and clausehood with special reference to the semantic histories of the terms sentence and clause including their ethical legal and administrative uses are assessed This is followed by a concise historical survey of the treatment of the sentence in a few of the ancient linguistic traditions notably the Greek Roman Alexandrian Arab and Sanskrit scholastic traditions A wide variety of sentence types from a cross section of languages spoken in Asia Europe and the Americas are presented by way of factual evidence for sentences and clauses as linguistic units Formally defined notions of the sentence and the clause as syntactic constituents in major theoretical frameworks are examined and assessed for their essential properties and points of

Sources of Variation in First Language Acquisition Maya Hickmann, Edy Veneziano, Harriet Jisa, 2018-02-22 Developmental research has long focused on regularities in language acquisition minimizing factors that might be responsible for variation Although researchers are now increasingly concerned with one or another of these factors this volume brings together research on three different sources of variation language specific properties the nature of the input to children across contexts and several aspects of the learners themselves Chapters explore these sources of variation within an interdisciplinary and comparative approach allying theories and methodologies stemming from linguistics psycholinguistics developmental psychology and neuroscience The comparative perspective involves different languages
