Protein-Nanoparticle Interactions Masoud Rahman, Sophie Laurent, Nancy

Tawil, L'Hocine Yahia, Morteza Mahmoudi, 2013-06-24 In recent years the fabrication of nanomaterials and exploration of their properties have attracted the attention of various scientific disciplines such as biology physics chemistry and engineering Although nanoparticulate systems are of significant interest in various scientific and technological areas there is little known about the safety of these nanoscale objects It has now been established that the surfaces of nanoparticles are immediately covered by biomolecules e.g. proteins ions and enzymes upon their entrance into a biological medium This interaction with the biological medium modulates the surface of the nanoparticles conferring a biological identity to their surfaces referred to as a corona which determines the subsequent cellular tissue responses The new interface between the nanoparticles and the biological medium proteins called bio nano interface has been very rarely studied in detail to date though the interest in this topic is rapidly growing In this book the importance of the physiochemical characteristics of nanoparticles for the properties of the protein corona is discussed in detail followed by comprehensive descriptions of the methods for assessing the protein nanoparticle interactions The advantages and limitations of available corona evaluation methods e.g. spectroscopy methods mass spectrometry nuclear magnetic resonance electron microscopy X-ray crystallography and differential centrifugal sedimentation are examined in detail followed by a discussion of the possibilities for enhancing the current methods and a call for new techniques Moreover the advantages and disadvantages of protein nanoparticle interaction phenomena are explored and discussed with a focus on the biological impacts
