Serological Tumour Markers An Introduction:

Serological Tumour Markers J. E. Roulston, R. C. F. Leonard, 1993 Gives an overview of the current status potential and clinical application of one of the latest techniques in cancer screening The authors outline the principles and practice of serological tumour markers and provide a concise context for their application

Serological Cancer Markers Stewart Sell, 2012-12-06 The purpose of this book the fourth volume of a series on Cancer Markers is intended to provide an updated status report on today's use of cancer markers in the diagnosis and monitoring of cancer with an emphasis on cancer markers detected in the serum It has been 7 years since the publication of the last volume in this series The 1980 1982 and 1985 volumes covered the development of cancer markers not only in their roles of unraveling the basic biology of cancer but also as increasingly important players in the management of patients with cancer During the last 7 years we have seen the application of a number of markers identified by monoclonal antibodies as well as the beginnings of the use of genetic markers defined by molecular probes Measurements of oncogenes in tissues or cells promise many applications for the future but as yet these genes have not shown to be useful as serum markers of cancer The commercial interest in serum markers for cancer particularly for the diagnosis and monitoring of tumor patients is indicated in Chapter 24 by Owen where the total worldwide market for cancer markers is projected to increase from 148 million in 1988 to 232 million in 1993 The degree of research interest in cancer markers is reflected in the fact that in 1988 a separate category for tumor markers was added to Index Medicus

Development and Application of Biomarkers Roger L. Lundblad, 2016-04-19 First introduced to biomedical research in 1980 the term biomarker has taken on a life of its own in recent years and has come to mean a number of things In biomedical science biomarker has evolved to most commonly mean a characteristic that can be used either as a diagnostic or a prognostic but most significantly as a screening indicator for p

The Evolution from Protein Chemistry to Proteomics Roger L. Lundblad, 2005-10-14 Largely driven by major improvements in the analytical capability of mass spectrometry proteomics is being applied to broader areas of experimental biology ranging from oncology research to plant biology to environmental health However while it has already eclipsed solution protein chemistry as a discipline it is still essentially an extension

Tumor Markers Research Perspective Geoffrey A. Sinise, 2007 Tumour markers are molecules occurring in blood or tissue that are associated with cancer and whose measurement or identification is useful in patient diagnosis or clinical management This book analyses potential signals of cancerous tumours otherwise known as markers or indicators This includes direct and rapid determination of cancer antigen potential tumour markers for cholangiocarcinoma melanoma inhibitory activity metastatic uveal melanoma measurement of tumour oxygenation bladder cancer markers epithelial cell adhesion and progression markers in prostate tumours

Molecular Diagnosis of Cancer Joseph E. Roulston, John M. S. Bartlett, 2008-02-01 We are currently experiencing a fundamental shift in the way in which we

approach the characterization of cancer Never before has the make up of cancer tissues and individual cells been so exhaustively researched and characterized We are now capable of producing molecular fingerprints that characterize the expression of all known and unknown genes within tumors and their surrounding tissues More than 30 000 different genes may be measured in each patient's tumor in a single experiment Simultaneously novel therapies that exploit the molecular roadmap have been developed and are now being offered to patients These novel agents such as Glivec Herceptin Iressa and others specifically target individual genes within tumors and can produce dramatic responses in some patients These drugs are only the forerunners of a coming tidal wave of novel therapeutics that individually target specific molecules within cancer cells more than 300 such agents are currently in phase I or II clinical trials This is an exciting time for cancer specialists and patients alike However if we have learned anything from the past 50 or more years of research into cancer it is that Lord Beaverbrook in founding the British national health service in the 1950s was frighteningly prescient when he defined the primary goal of health care to be Diagnosis Diagnosis Diagnosis Now more than ever it is essential that appropriate diagnostic methods and approaches are applied to the selection of patients for treatment

Cellular Cancer Markers Carleton T. Garrett, Stewart Sell, 2013-03-09 In Cellular Cancer Markers leading pathologists and physicians review today's most promising cellular cancer markers an important emerging class of prognostic markers that can be used in the clinical evaluation of cancer patients The markers reviewed have been chosen because they are biologically relevant to the growth of cells and possess an accurate and reproducible assay for detection They also are predictors of tumor behavior are useful in making clinical decisions and are cost effective Cellular Cancer Markers provides a status report for markers of tumor cell activation proliferation and longevity that makes possible an informed judgment regarding the value of many newly proposed tumor markers It also offers insight into the latest approaches to diagnosing cancer and an appreciation of how these marker based tests can clarify the prognosis of cancer

Ovarian Cancer John M. S. Bartlett, 2008-02-02. If there is one aspect of current cancer research that represents a major challenge in both novice and experienced researchers it is the rapid advance in our understanding of the disease. Researchers can be required to switch from analysis of gene expression to kinetics of protein activation from genetic studies to the analysis of protein function. Cancers are highly complex disease systems and researchers aiming to understand the functioning of cancer systems require access to a wide range of laboratory techniques from a broad range of research disciplines. Increasingly however published methods are incomplete or refer back to a series of previous publications each containing only a small part of the complete protocol. The aim of *Ovarian Cancer Methods and Protocols* is to provide for ovarian cancer researchers in the first instance a laboratory handbook that will facilitate research into cancer systems by providing a series of expert protocols with proven efficacy across a broad range of technical expertise. Thus there are sections on tumor genetics and cellular signal transduction as well as sections on apoptosis and RNA analysis. The value of *Ovarian Cancer Methods and Protocols* to the ovarian cancer researcher will I trust be considerably enhanced by 1 the provision of a series of overviews relating to the biology, diagnosis and treatment of this important neoplasm and 2 the provision of a series of technical overviews introducing each part that provides an expert review of the applications and pitfalls of the various techniques included.
