in Literature      Unity and diversity in grammaticalization scenarios Walter Bisang, Andrej Malchukov, 2017 The volume contains a selection of papers originally presented at the symposium on Areal patterns of grammaticalization and cross linguistic variation in grammaticalization scenarios held on 12-14 March 2015 at Johannes Gutenberg University of Mainz The papers written by leading scholars combining expertise in historical linguistics and grammaticalization research study variation in grammaticalization scenarios in a variety of language families Slavic Indo-Aryan Tibeto-Burman Bantu Mande Khoisan Siouan and Mayan The volume stands out in the vast literature on grammaticalization by focusing on variation in grammaticalization scenarios and areal patterns in grammaticalization Apart from documenting new grammaticalization paths the volume makes a methodological contribution as it addresses an important question of how to reconcile universal outcomes of grammaticalization processes with the fact that the input to these processes is language specific and construction specific      *Studies in the New Testament* J. forget The Serpent's Gift Jeffrey J. Kripal, 2008-09-15 Because thou hast done this thou art cursed above all cattle and above every beast of the field With those words in Genesis God condemns the serpent for tempting Adam and Eve and the serpent has shouldered the blame ever since But how would the study of religion change if we looked at the Fall from the snake's point of view Would he appear as a bringer of wisdom more generous than the God who wishes to keep his creation ignorant Inspired by the early Gnostics who took that startling view Jeffrey J Kripal uses the serpent as a starting point for a groundbreaking reconsideration of religious studies and its methods In a series of related essays he moves beyond both rational and faith based approaches to religion exploring the erotics of the gospels and the sexualities of Jesus John and Mary Magdalene He considers Feuerbach's Gnosticism the untapped mystical potential of comparative religion and even the modern mythology of the X Men Ultimately The Serpent's Gift is a provocative call for a complete reorientation of religious studies aimed at a larger understanding of the world the self and the divine

Architectural Energetics in Archaeology Leah McCurdy, Elliot M. Abrams, 2019-01-25 Archaeologists and the public at large have long been fascinated by monumental architecture built by past societies Whether considering the earthworks in the Ohio Valley or the grandest pyramids in Egypt and Mexico people have been curious as to how pre modern societies with limited technology were capable of constructing monuments of such outstanding scale and quality Architectural energetics is a methodology within archaeology that generates estimates of the amount of labor and time allocated to construct these past monuments This methodology allows for detailed analyses of architecture and especially the analysis of the social power underlying such projects Architectural Energetics in Archaeology assembles an international array of scholars who have analyzed architecture from archaeological and historic societies using architectural energetics It is the first such volume of its kind In addition to applying architectural energetics to a global range of architectural works it outlines in detail the estimates of costs that can be used in future architectural analyses This volume will serve archaeology and classics researchers and lecturers teaching undergraduate and graduate courses related to social power and architecture It also will interest architects examining past construction and engineering projects

 Anderson, Sanjukta Bhanja, 2014-05-31 Field coupled nanocomputing FCN paradigms offer fundamentally new approaches to  
 digital information processing that do not utilize transistors or require charge transport Information transfer and  
 computation are achieved in FCN via local field interactions between nanoscale building blocks that are organized in  
 patterned arrays Several FCN paradigms are currently under active investigation including quantum dot cellular automata  
 QCA molecular quantum cellular automata MQCA nanomagnetic logic NML and atomic quantum cellular automata AQCA  
 Each of these paradigms has a number of unique features that make it attractive as a candidate for post CMOS  
 nanocomputing and each faces critical challenges to realization This State of the Art Survey provides a snapshot of the  
 current developments and novel research directions in the area of FCN The book is divided into five sections The first part  
 Field Coupled Nanocomputing Paradigms provides valuable background information and perspectives on the QDCA MQCA  
 NML and AQCA paradigms and their evolution The second section Circuits and Architectures addresses a wide variety of  
 current research on FCN clocking strategies logic synthesis circuit design and test logic in memory hardware security and  
 architecture The third section Modeling and Simulation considers the theoretical modeling and computer simulation of large  
 FCN circuits as well as the use of simulations for gleaning physical insight into elementary FCN building blocks The fourth  
 section Irreversibility and Dissipation considers the dissipative consequences of irreversible information loss in FCN circuits  
 their quantification and their connection to circuit structure The fifth section The Road Ahead Opportunities and Challenges  
 includes an edited transcript of the panel discussion that concluded the FCN 13 workshop
