Understanding Climate's Influence on Human Evolution National Research Council, Division on Earth and Life Studies, Board on Earth Sciences and Resources, Committee on the Earth System Context for Hominin Evolution, 2010-04-17 The hominin fossil record documents a history of critical evolutionary events that have ultimately shaped and defined what it means to be human including the origins of bipedalism the emergence of our genus *Homo* the first use of stone tools increases in brain size and the emergence of *Homo sapiens* tools and culture The Earth's geological record suggests that some evolutionary events were coincident with substantial changes in African and Eurasian climate raising the possibility that critical junctures in human evolution and behavioral development may have been affected by the environmental characteristics of the areas where hominins evolved Understanding Climate's Change on Human Evolution explores the opportunities of using scientific research to improve our understanding of how climate may have helped shape our species Improved climate records for specific regions will be required before it is possible to evaluate how critical resources for hominins especially water and vegetation would have been distributed on the landscape during key intervals of hominin history Existing records contain substantial temporal gaps The book's initiatives are presented in two major research themes first determining the impacts of climate change and climate variability on human evolution and dispersal and second integrating climate modeling environmental records and biotic responses Understanding Climate's Change on Human Evolution suggests a new scientific program for international climate and human evolution studies that involve an exploration

initiative to locate new fossil sites and to broaden the geographic and temporal sampling of the fossil and archeological record a comprehensive and integrative scientific drilling program in lakes lake bed outcrops and ocean basins surrounding the regions where hominins evolved and a major investment in climate modeling experiments for key time intervals and regions that are critical to understanding human evolution

Beyond Beliefs Logan Gray, 2024-12-03 *Beyond Beliefs: The Philosophy of Agnosticism* *Beyond Beliefs: The Philosophy of Agnosticism* is a bold invitation to explore the limits of human knowledge and the essence of doubt. In this profound philosophical journey, Logan Gray unveils the historical, epistemological, and cultural roots of agnosticism, a stance that challenges both religious dogmatism and absolute skepticism. Through a rich and provocative analysis, the author guides readers through questions that transcend the everyday: What does it mean not to know? How does humanity grapple with the unknowable? With a critical yet respectful approach, the book delves into topics ranging from cosmological arguments and the impact of evolution to the intricate relationships between science, spirituality, and society. More than just a philosophy, *Beyond Beliefs* is a way of thinking, a manifesto for intellectual humility in a world overflowing with illusory certainties. This is an essential book for curious minds seeking to understand themselves and the universe not as a set of definitive answers but as a journey toward the unknown.

Human Origins New Scientist, 2018-03-21 Where did we come from? Where are we going? *Homo sapiens* is the most successful, the most widespread, and the most influential species ever to walk the Earth. In the blink of an evolutionary eye, we have spread around the globe, taken control of Earth's biological and mineral resources, transformed the environment, discovered the secrets of the universe, and travelled into space. Yet just 7 million years ago, we were just another species of great ape, making a quiet living in the forests of East Africa. We do not know exactly what this ancestor was like, but it was no more likely than a chimpanzee or gorilla to sail across the ocean, write a symphony, invent a steam engine, or ponder the meaning of existence. How did we get from there to here? *Human Origins* recounts the most astonishing evolutionary tale ever told. Discover how our ancestors made the first tentative steps towards becoming human, how we lost our fur but gained language, fire, and tools, how we strode out of Africa, invented farming and cities, and ultimately created modern civilisation, perhaps the only one of its kind in the universe. Meet your long-lost ancestors, the other humans.
