Phytochemical Methods Nikolaus H. Fischer, Murray B. Isman, Helen A. Stafford, 2012-12-06 This volume contains reviews which are based on a symposium given at the 30 meeting of The Phytochemical Society of North America held at Laval University in Quebec City Canada on August 11 15 1990 During the past two decades there have been major new developments in methods which can be applied toward the isolation separation and structure determination of complex natural products Therefore the topic of this symposium *Modern Phytochemical Methods* is a very timely one The organizers of the symposium recognized that it would not be possible to cover in detail all new advances in phytochemical methodology It was therefore decided to emphasize general reviews on recent developments of major separation techniques such as high performance liquid chromatography as well as supercritical fluid chromatography In addition advances in commonly used structure determination methods mainly NMR and MS are reviewed Other topics include methodologies of micro sampling for isolation and analysis of trichome constituents as well as recent breakthroughs on biosynthetic studies of monoterpenes using enriched basal cells of trichomes The volume concludes with a review of quantitative structure activity relationship QSAR studies of biologically active natural products In Chapter I K Hostettmann and his colleagues give a general review of recent developments in the separation of natural products with major emphasis on preparative separations of biologically

active plant constituents The authors present a comparison of droplet countercurrent chromatography OCCC with the highly rapid and more versatile centrifugal partition chromatography CPC *The Mechanization, Automation, and Increased Effectiveness of the Clinical Laboratory* National Institute of General Medical Sciences (U.S.).
