Dear, Jim Ketchum, Sarah Luria, Doug Richardson, 2011-04-14 In the past decade there has been a convergence of transdisciplinary thought characterized by geography's engagement with the humanities and the humanities integration of place and the tools of geography into its studies GeoHumanities maps this emerging intellectual terrain with thirty cutting edge contributions from internationally renowned scholars architects artists activists and scientists This book explores the humanities rapidly expanding engagement with geography and the multi methodological inquiries that analyze the meanings of place and then reconstructs those meanings to provoke new knowledge as well as the possibility of altered political practices It is no coincidence that the geohumanities are forcefully emerging at a time of immense intellectual and social change This book focuses on a range of topics to address urgent contemporary imperatives such as the link between creativity and place altered practices of spatial literacy the increasing complexity of visual representation in art culture and science and the ubiquitous presence of geospatial technologies in the Information Age GeoHumanities is essential reading for students wishing to understand the intellectual trends and forces driving scholarship and research at the intersections of geography and the humanities disciplines These trends hold far reaching implications for future work in these disciplines and for understanding the changes gripping our societies and our globalizing world *Trust, Our Second Nature* Thomas O.

Buford, 2009-01-16 The thesis of this book is that only a social personalism and no form of impersonalism can adequately account for the solidarity and stability of what we individuals share with all other members of our society our second nature In the ancient world the discussion of society at least since Plato and Aristotle began with the social nature of individuals as found in families and proceeded to topics such as the formation and the well ordering of societies according to eternal principles grasped by reason Since the beginning of the modern world at least since Hobbes and Locke the discussion of society began with the relation of persons and society and then moved on to other topics usually political and legal ones The central problem was to find the basis on which individuals formed societies and how they could do so Buford's question is with a more basic issue What do individuals and society share in common or what philosophers since Cicero have called our second nature and how to best understand its unity and stability The crisis of our culture in the erosion of both solidarity and stability pointedly manifests itself in our second nature There the culture in which we live is felt lived and shared Buford asks

how we can lay bare our second nature revealing the extent of the crisis Our second nature is the form of social actions of persons in triadic relations and Buford argues that it is there that we find that trust unifies a society and provides the basis for the institutions that stabilize it

**John Dewey's Metaphysical Theory** Paul Benjamin Cherlin, 2023-09-22 John Dewey's Metaphysical Theory

provides an overview and technical exposition of Dewey's mature ontological theory. In particular, nature experience and their relationship are given extended treatment through a close reading of primary texts. Following Dewey's metaphysical postulates and conclusions, the book suggests how experience may reveal the fundamental traits of nature. In addition, the book reveals how Dewey understood the ways in which all phenomena may relate within an inclusive economy of existence: what it means to have an identity, what constitutes selfhood or personality, and how metaphysics relates to the ideals of democracy and social ethics.

**Biodiversity** Edward C. Lefroy, 2008. Publisher's description: Australia's experience in community-based environmental repair is unique in the world, with no shortage of analysis by bureaucrats, academics, and environmentalists. This collection of 17 case studies gives a view from ground level. It includes heroic accounts of families who changed their way of farming and their relationship to the land so significantly they found they could stop hand-feeding stock during a drought and see the bush coming back. It describes the experience with bush tenders, which were oversubscribed as farmers competed with each other for stewardship payments to manage their grazing lands for endangered ground-nesting birds as well as beef and wool. And it tells of a group of wheat growers who plant patches of grassland for beneficial insects that save them tens of thousands of dollars a year in pesticide bills. The case studies arose from a meeting of 250 farmers, foresters, and fishers from all Australian states who met in Launceston as guests of the community group Tamar Natural Resource Management to reflect on the question: Is it possible to be good environmental managers and prosper in our businesses? As well as tales of environmental hope, there are also messages about the limits of duty of care, the need to share the costs of achieving society's expectations, and the possibility of learning from unlikely places. **Biodiversity: Integrating Conservation and Production** includes the seven Tamar Principles distilled by the delegates from the meeting for those on the front line.

Restoring Layered Landscapes Marion Hourdequin, David G. Havlick, 2016. **Restoring Layered Landscapes** explores ecological restoration in complex landscapes where ecosystems intertwine with important sociopolitical meanings. This volume considers restoration and interpretation of complex landscapes such as former industrial sites, asking how restoration can remain faithful to the past while anticipating the future in an era of unprecedented environmental change.

**Alienation and Nature in Environmental Philosophy** Simon Hailwood, 2015-08-21. Many environmental scientists, scholars, and activists characterise our situation as one of alienation from nature, but this notion can easily seem meaningless or irrational. In this book, Simon Hailwood critically analyses the idea of alienation from nature and argues that it can be a useful notion when understood pluralistically. He distinguishes different senses of alienation from

nature pertaining to different environmental contexts and concerns and draws upon a range of philosophical and environmental ideas and themes including pragmatism eco phenomenology climate change ecological justice Marxism and critical theory His novel perspective shows that different environmental concerns both anthropocentric and nonanthropocentric can dovetail rather than compete with each other and that our alienation from nature need not be something to be regretted or overcome His book will interest a broad readership in environmental philosophy and ethics political philosophy geography and environmental studies Environment, Ethics and Cultures Kay Stables, Keirl Steve, 2015-02-27 This collection engages environmental ethical and cultural values perspectives to show how Design and Technology D second of D third by taking global and multiple perspectives rather than say Western or mono cultural positions and fourth by demonstrating D T s capacities for working in holistic and integrative cross curricular ways The authors show how students can not only learn about their potential as humans as designers but can also develop designerly capacities that enable them to contribute meaningfully in practical ways to their communities and to wider society that is as global citizens who can apply design capability in ethical ways that are respectful of peoples cultures and environments alike
