V. Quine,Willard Van Orman Quine,1990 Our only channel of information about the world is the impact of external forces on our sensory surfaces So says science itself There is no clairvoyance How then can we have parlayed this meager sensory input into a full blown scientific theory of the world This is itself a scientific question The pursuit of it with free use of scientific theory is what I call naturalized epistemology The Roots of Reference falls within that domain Its more specific concern within that domain is reference to concrete and abstract objects what such reference consists in and how we achieve it Part I is a statement of general psychological presumptions regarding perception and learning The underlying notions of cause and disposition are examined in a philosophical spirit In Part II those considerations are brought to bear more particularly on the learning of language Part II comes firmly to grips with the nature of reification and reference The process is inseparable from

language and unequivocally identifiable only to the degree that the language resembles ours in certain structural respects Stages of reification are sorted out rudimentary to full fledged The full phase is heralded by the use of the relative clause with its relative pronoun and subsidiary pronouns It is these pronouns that recur in logical notation as the bound variables of quantification Part III concludes with a conjectural sketch of the development of reification in the race and the individual Especial attention is directed to the positing of abstract objects properties classes numbers It is traced in large part to the serendipity of fruitful confusions Truth after all can issue from fallacious proofs to condemn the outcome for its fallacious origin is simply to add the genetic fallacy to what had gone before Let us count our blessings
