Rosenberg,Roberto C. Izaurralde,2013-03-09 Soil carbon sequestration can play a strategic role in controlling the increase of CO<sub>2</sub> in the atmosphere and thereby help mitigate climatic change There are scientific

opportunities to increase the capacity of soils to store carbon and remove it from circulation for longer periods of time The vast areas of degraded and desertified lands throughout the world offer great potential for the sequestration of very large quantities of carbon If credits are to be bought and sold for carbon storage quick and inexpensive instruments and methods will be needed to monitor and verify that carbon is actually being added and maintained in soils Large scale soil carbon sequestration projects pose economic and social problems that need to be explored This book focuses on scientific and implementation issues that need to be addressed in order to advance the discipline of carbon sequestration from theory to reality The main issues discussed in the book are broad and cover aspects of basic science monitoring and implementation The opportunity to restore productivity of degraded lands through carbon sequestration is examined in detail This book will be of special interest to professionals in agronomy soil science and climatology

Chalmer,2021-05-03

Global food security is dependent on ecologically viable production systems but current agricultural practices are often at odds with environmental sustainability Resolving this disparity is a huge task but there is much that can be learned from traditional food production systems that persisted for thousands of years Ecoagriculture for a Sustainable Food Future describes the ecological history of food production systems in Australia showing how Aboriginal food systems collapsed when

European farming methods were imposed on bushlands The industrialised agricultural systems that are now prevalent across the world require constant input of finite resources and continue to cause destructive environmental change This book explores the damage that has arisen from farming systems unsuited to their environment and presents compelling evidence that producing food is an ecological process that needs to be rethought in order to ensure resilient food production into the future Cultural sensitivity Readers are warned that there may be words descriptions and terms used in this book that are culturally sensitive and which might not normally be used in certain public or community contexts While this information may not reflect current understanding it is provided by the author in a historical context

**The Future of Soil Carbon** Carlos Garcia, Paolo Nannipieri, Teresa Hernandez, 2018-04-10 The Future of Soil Carbon Its Conservation and Formation provides readers with an integrative approach to understanding the important role of organic carbon in soil functioning and fertility Terrestrial interactions between SOC and complex human natural systems require new fundamental and applied research into regional and global SOC budgets This book provides new and synthesized information on the dynamics of SOC in the terrestrial environment In addition to rigorous state of the art on soil science the book also provides strategies to avoid risks of soil carbon losses Soil organic carbon SOC is a vital component of soils with important and far reaching effects on the functioning of terrestrial ecosystems Human activities over the last several decades have significantly changed the regional and global balance of SOC greatly exacerbating global warming and climate change

Provides a holistic overview of soil carbon status and main threats for its conservation Offers innovative solutions to conserve soil carbon Includes in depth treatment of regional and global changes in soil organic carbon budget      **Ecophysiology of Small Desert Mammals** Allan A. Degen, 2012-12-06 Since small mammals have a large surface to mass ratio one would expect them to quickly dehydrate and perish at high environmental temperatures Nonetheless a large number of small mammal species inhabit deserts This fascinating phenomenon is investigated by Prof A Allan Degen in his book The majority of small desert mammals are rodents but shrews of several grams and small foxes of 1 kg are also present Their survival is due mainly to behavioural adaptations and habitat selection however physiological adaptations also contribute to the success Interestingly many small mammals that live in different deserts of the world show similarities in their adaptive traits although they have different taxonomic affinities      **Methods of Soil Analysis, Part 2** Peter J.
