Semi-arid Soil And Water Conservation:

Soil and Water Conservation in Semi-arid Areas Norman Hudson, 1987-01-01 The problems of agriculture in the semi arid regions Assessing the possibilities for improving agriculture Soil conservation Water conservation Water harvesting and use Applications of water conservation

Semi-arid Soil and Water Conservation Finkel, 2018-01-18 In this volume the erosion and conservation measures discussed are for the most part those under unirrigated agriculture The use of irrigation could cause significant changes in the growing seasons and in the agricultural calendar especially in the warmer climates where temperature is not a limiting factor It is further noted that much of the material in this volume has been prepared with the developing countries of the so called Third World in mind In many of these countries there is a dearth of basic data such as long term hydrological records detailed soil and topographic surveys and experimental results for various types of erosion control measures Some design procedures cannot be imitated or copied directly from those of the technologically more advanced countries Consequently emphasis will be placed wherever possible upon simple empirical methods of design and approximate solutions within the limitations of the available data technical possibilities and financial resources of the Third World countries Much of the numerical data and calculations will be presented in the metric system *SEMI-ARID SOIL & WATER CONSERVATION* Herman J. levels **Runoff, Infiltration and Subsurface Flow of Water in Arid and Semi-Arid Regions** Arie S. Issar, S.D. Resnick, 2013-06-29 Arid and semi arid regions can be defined as environments in which water is the limiting factor for bio systems This means that survival of life in these regions involves a constant struggle to obtain this limited commodity and draw the maximum benefit out of it However despite the difficulties for plants animals and man to live in these regions they are being utilized more and more because of the pressure of world population growth This is expressed in the expansion of agricultural activities in desert lands as well as by the formation and rapid growth of urban and industrial centers These trends result in a growing demand for water on the one hand and the disposal of vast amounts of waste water as well as other types of refuse on the other Meeting the first demand namely supplying water to the agricultural communities and urban centers involves in many instances the over exploitation and misuse of natural water resources The surplus of waste water sometimes highly loaded with toxic compounds is likely to cause irreversible damage to the environment The geoscientists and engineers face a challenge on two conflicting fronts Success on one front namely in answering the full demand for water may lead to an increase in the pollution of the environment by waste water **Innovations as Key to the Green Revolution in Africa** Andre Bationo, Boaz Waswa, Jeremiah M. Okeyo, Fredah Maina, Job Maguta Kihara, 2011-08-30 Africa can achieve self sufficiency in food production through adoption of innovations in the agriculture sector Numerous soil fertility and crop production technologies have been generated through research however wide adoption has been low African farmers need better technologies more sustainable practices and fertilizers to improve and sustain their crop productivity and to prevent further degradation of agricultural lands The agricultural sector also needs to be supported by functional institutions and policies that will be able to respond to emerging challenges of globalization and climate change **Rainwater-Smart Agriculture in Arid and Semi-Arid Areas** Walter Leal Filho, Josep de Trincheria Gomez, 2017-12-28 This book introduces state of the art approaches methods and research focusing on smart management of rainwater In addition it provides an overview of projects from across the world illustrating how rainwater smart management has been implemented in drylands Focusing on the scientific perspective it demonstrates how rural dryland agriculture can be improved It also documents the wealth of rainwater smart know how available today and replicates and transfers results to other countries and regions to encourage cross sector interactions among various stakeholders such as practitioners from governmental and public organisations policy and decision makers and teaching staff from academic scientific institutions The contributors showcase vital lessons learned from research field projects and best practice examples They address the integrated use of rainwater harvesting management with landscape restoration practices and water and climate smart agriculture for food security and poverty alleviation in arid and semi arid areas Original research combined with the contributors synthetic approach lays a foundation for new concepts and ideas Through case studies and research reports the book discusses all the relevant issues necessary for the comprehensive analysis and successful implementation of the

technologies in rainwater management Highlighting the working principles and technical recommendations with regard to cost efficient rainwater smart solutions it is of interest to practitioners It is also a valuable resource for academic specialists professionals and students since many development agencies are funding rainwater harvesting for irrigation purposes

Selected Water Resources Abstracts ,1991 *Agriculture in Semi-Arid Environments* A.E. Hall,G.H. Cannell,H.W. Lawton,2012-12-06 The semi arid zones of the world are fragile ecosystems which are being substantially modified by the activities of mankind Increasing human populations have resulted in greater demands on semi arid zones for providing human sustenance and the possibility that this may enhance desertification is a grave concern These zones are harsh habitats for humans The famines that resulted from drought during the late 1960 s and the 1970 s in the African Sahel illustrated the unreliability of present agricultural systems in this zone Large fluctuations in agricultural production have occurred in semi arid zones of Australia North America and the Soviet Union due to periodic droughts even though considerable agricultural technology has been devoted to agricultural development in these zones The challenge to mankind is to manage these different semi arid zones so that productivity is increased and stabilized and environmental deterioration is decreased Irrigation can be used to increase and stabilize agricultural production in semi arid zones as discussed in Volume 5 of this series Arid Zone Irrigation The present volume Agriculture in Semi Arid Environments focuses on dryland farming in semi arid zones and is relevant to the large areas of the world where rainfall is limiting and where water is not available for irrigation This volume is designed to assist agricultural development in these areas and consists of reviews and analyses of available information by scientists working in Africa Australia and at the University of California **Soil, Water, and Crop/livestock Management Systems for Rainfed Agriculture in the Near East Region** ,1989

Farming in Arid and Semiarid Lands Carol A. Singer,1994 **Community and Climate Resilience in the Semi-Arid Tropics** S. P. Wani,K. V. Raju,2020-01-22 This book focuses on developing an integrated holistic approach for harnessing the potential of rain fed agriculture In this approach rainwater management through harvesting and recharging the groundwater is used as an entry point activity for increasing the productivity for farmers through enhanced water use efficiency To provide the holistic and integrated solutions the approach of consortium through building partnerships with different stakeholders eg different research institutions State National and International development departments eg Department of Agriculture Department of Animal Husbandry etc Non Government Organizations NGOs Farmers Organizations Community based Organizations CBOs along with market linkages through private companies **Sustainable Horticulture in Semiarid Dry Lands** Shrikant Hiwale,2015-03-16 This book discusses ways of increasing production unit area by making full use of the soil and water under the harsh climatic conditions of semiarid areas This leads to improved sustainability increased availability of fresh produce which is vital for human health and higher incomes for small and marginal farmers Arid and semiarid areas account for almost 70 per cent of the total cropped area of India In these areas physical constraints

like low and erratic rainfall high temperature high wind velocity low fertility poor soil structure salinity of soil and ground water all limit reliable crop production In the absence of any type of aggregation the soils are highly erodible lack structure and have a very coarse in texture with low water holding capacity Intensive agricultural practices increasing population pressure climatic changes environmental pollution loss of biodiversity soil erosion salinization and water depletion are all threatening the sustainability of agriculture In view of the mounting demand for food it is vital to link enhanced food production with nutritional security conservation of natural resources increasing farmers incomes employment generation through agricultural diversification Horticulture particularly of fruit trees can play a major role in solving the problem of nutrition as fruits are rich source of vitamins and minerals and have antioxidant properties Fruit trees which are mostly deciduous add leaf litter to the soil and this ultimately helps to improve the condition of the soil In addition fruit trees are known to reduce soil erosion and reduce run off The trees also play a major role in purifying the environment as they are the known carbon sequesters Fruit tree cultivation is a profitable preposition There is no scope to increase the land surface all increase in productivity therefore has to be from the available land This means introducing cropping systems that can meet the basic food fodder and fuel requirement of farming families
