Watkins,2012-12-06 This volume has been created in honor of the seventieth birthday of Ted Harris which was celebrated on January 11th 1989 The papers rep resent the wide range of subfields of probability theory in which Ted has made profound and fundamental contributions This breadth in Ted s research complicates the task of putting together in his honor a book with a unified theme One common thread noted was the spatial or geometric aspect of the phenomena Ted investigated This volume has been organized around that theme with papers covering four major subject areas of Ted s research branching processes percola tion interacting particle systems and stochastic flows These four topics do not exhaust his research interests his major work on Markov chains is commemorated in the standard technology Harris chain and Harris recurrent The editors would like to take this opportunity to thank the speakers at the symposium and the contributors to this volume Their enthusi astic support is a tribute to Ted Harris We

Mason,Jon

A. Wellner,2012-12-06 High dimensional probability in the sense that encompasses the topics rep resented in this volume began about thirty years ago with research in two related areas limit theorems for sums of independent Banach space valued random vectors and general Gaussian processes An important feature in these past research studies has been the fact that they highlighted the es sential probabilistic nature of the problems considered In part this was because by working on a general Banach space one had to discard the extra and often extraneous structure imposed by random variables taking values in a Euclidean space or by processes being indexed by sets in R or Rd Doing this led to striking advances particularly in Gaussian process theory It also led to the creation or introduction of powerful new tools such as randomization decoupling moment and exponential inequalities chaining isoperimetry and concentration of measure which apply to areas well beyond those for which they were created The general theory of em pirical processes with its vast applications in statistics the study of local times of Markov processes certain problems in harmonic analysis and the general theory of stochastic processes are just several of the broad areas in which Gaussian process techniques and techniques from probability in Banach spaces have made a substantial impact Parallel to this work on probability in Banach spaces classical proba bility and empirical process theory were enriched by the development of powerful results in strong approximations   Probability in Banach Spaces 7 Eberlein,Külbs,Marcus,2012-12-06 The first international conference on Probability in Banach Spaces was held at Oberwolfach West Germany in 1975 It brought together European researchers who under the inspiration of the Schwartz Seminar in Paris were using probabi listic methods in the study of the geometry of Banach spaces a rather small number of probabilists who were already studying classical limit laws on Banach spaces and a larger number of probabilists specialists in various aspects of the study of Gaussian processes whose results and techniques were of interest to the members of the first two groups This first conference was very fruitful It fos tered a continuing relationship among 50 to 75 probabilists and analysts working on probability on infinite dimensional spaces the geometry of Banach spaces and the use of random methods in harmonic analysis Six more international conferences were held since the 1975 meeting Two of the meetings were held at Tufts University one at S nderborg Denmark and the others at Oberwolfach This volume contains a selection of papers by the partici pants of the Seventh International Conference held at Oberwolfach West Ger many June 26 July 2 1988 This exciting and provocative conference was at tended by more than 50 mathematicians from many countries These papers demonstrate the range of interests of the conference participants In addition to the ongoing study of classical and modern limit theorems in Banach spaces a branching out has occurred among the members of this group
