Sensing Intelligence Motion:

Sensing, Intelligence, Motion Vladimir J. Lumelsky, 2005-11-28 A leap forward in the field of robotics Until now most of the advances in robotics have taken place in structured environments Scientists and engineers have designed highly sophisticated robots but most are still only able to cooperate and move in predetermined planned environments designed specifically for the robots and typically at very high cost This new book takes robotics to the next level by setting forth the theory and techniques needed to achieve robotic motion in unstructured environments The ability to move and operate in an arbitrary unplanned environment will lead to automating a wider range of new robotic tasks such as patient care toxic site cleanup and planetary exploration The approach that opens the door for robots to handle unstructured tasks is known as Sensing Intelligence Motion SIM which draws from research in topology computational complexity control theory and sensing hardware Using SIM as an underlying foundation the author's carefully structured presentation is designed to Formulate the challenges of sensor based motion planning and then build a theoretical foundation for sensor based motion planning strategies Investigate promising algorithmic strategies for mobile robots and robot arm manipulators in both cases addressing motion planning for the whole robot body Compare robot performance to human performance in sensor based motion planning to gain better insight into the challenges of SIM and help build synergistic human robot teams for teleoperation tasks It is both exciting and encouraging to discover that robot performance decisively exceeds human performance in certain tasks requiring spatial reasoning even when compared to trained operators Review sensing hardware that is necessary to realize the SIM paradigm Some 200 illustrations graphic sketches and photos are included to clarify key issues develop and validate motion planning approaches and demonstrate full systems in operation As the first book fully devoted to robot motion planning in unstructured environments Sensing Intelligence Motion is a must read for engineers scientists and researchers involved in robotics It will help them migrate robots from highly specialized applications in factories to widespread use in society where autonomous robot motion is needed

Intelligent Sensors H. Yamasaki, 1996-04-22 Sensors are the front end devices for information acquisition from the natural and or artificial world Higher performance of advanced sensing systems is achieved by using various types of machine intelligence Intelligent sensors are smart devices with signal processing functions shared by distributed machine intelligence Typical examples of intelligent sensors are the receptors and dedicated signal processing systems of the human sensory systems The most important job of information processing in the sensory system is to extract necessary information from the receptors signals and transmit the useful information to the brain This dedicated information processing is carried out in a distributed manner to reduce the work load of the brain The processing also lightens the load of signal transmission through the neural network the capacity of which is limited Although the performance of the receptors in our human sensory system is not always ideal and is frequently inferior to that of man made sensors the total performance is usually far superior to those of our technical sensing systems The weak points of human receptors are masked by the information processing This processing makes our sensory system adaptable to the environment and optimizes system performance The basic idea of this book which contains new computing paradigms is that the most advanced intelligent sensing system is the human sensory system Section I reviews the technologies of intelligent sensors and discusses how they developed Typical approaches for the realization of intelligent sensors emphasizing the architecture of intelligent sensing systems are also described In section II fundamental technologies for the fabrication of intelligent sensors and actuators are presented Integration and micro miniaturization techniques are emphasized Section III presents advanced technologies approaching human sensory systems these technologies are not directly aimed at practical applications but introduce the readers to the development of engineering models of sensory systems Technologies of integrated intelligent sensors which will shortly be in use are introduced in section IV In section V examples are given of intelligent sensing systems which are used in industrial installations Hardware for machine intelligence is not integrated at present but can soon be implemented in the monolithic integrated structure Without this machine intelligence new functions for example self diagnosis or defects identification cannot be realized This section also demonstrates the potential of intelligent sensors in industry Section VI introduces two interesting topics which are closely related to intelligent sensing systems The first one is multisensor fusion It is expected to be one of the fundamental and powerful technologies for realizing an advanced intelligent sensing systems The second is visualizing technology of the sensed states for easy comprehension of the dynamic multi dimensional state This is useful for intelligent man machine interfaces This book will be recognised by readers as a milestone in the rapid progress of intelligent sensors
