Sensory Robotics For The Handling Of Lim:

Sensory Robotics for the Handling of Limp Materials Paul M. Taylor, 2012-12-06 Limp materials are used in many economically important industries such as garment manufacture shoe manufacture aerospace composites and automobiles seats and trim The use of sensors is essential for reliable robotic handling of these materials which are often based on naturally occurring substances such as cotton and leather The materials are limp and have non homogeneous mechanical properties which are often impossible to predict accurately The applications are very demanding for vision and tactile sensing and signal processing adaptive control systems planning and systems integration This book comprises the collection of papers presented at the NATO Advanced Research Workshop on Sensory Robotics for the Handling of Limp Materials held in October 1988 at II Ciocco Tuscany Italy The aim of the workshop was to examine the state of the art and determine what research is needed to provide the theoretical and technological tools for the successful application of sensory robotics to the handling of limp materials The meeting also acted as the first ever forum for the interchange of knowledge between applications driven researchers and those researching into the provision of fundamental tools The participants were drawn from academia 20 industry 5 and other non university research organisations 5
